

case/4/0

The Introductory Version

We want to welcome you to case/4/0, the structured software development environment from microTOOL. We created for you a demo version of our well-tried development tool, with which you can try all of the case/4/0 functions and test its performance firsthand.

Hardware Requirements

- Windows PC 386 or higher
- 8 MB memory, or 16 MB when you wish to efficiently use OLE with MS Word
- 20 MB free space on your harddisk

Software Requirements

- MS Windos 3.1x
- MS Word 6.0a

Attention: This version cannot be used for real, productive application development. The internal data model of the demo version differs from the full version. There is no way of continuing a demo version project with the full version of case/4/0!

The extent of the data you can enter is very restricted, and you do not have the capability of saving your data (if you want to get a detailed description of the demo version's restrictions, please refer to the respective section below) . The example application displays the capabilities offered by case/4/0. The source code, however, is not always complete and cannot be reused in other applications.

It is possible in highly unlikely cases that executing case/4/0 might disturb the execution of other running programs. If you want to guarantee that such disturbances do not occur, shut down the other programs before you start case/4/0.

Installation

This is how you install the demo version:

Select the **File/Run** command from the Program Manager or File Manager, and enter d:\setup, whereby d:\ stands for your CD ROM drive. Follow the instructions that appear afterwards on the screen.

Discover case/4/0

A PDF document created with Adobe Acrobat is installed together with the demo version. Here you are provided with a lot of information concerning case/4/0 as well as stimulation for starting a tour of case/4/0 on your own. However, this document can only be read and printed when in addition to case/4/0, you have the Acrobat Reader installed.

microTOOL cannot exclude the highly unlikely possibility that installing and executing the Acrobat Reader might disturb the functioning of other programs or result in a loss of data. If you want to be absolutely sure that negative effects will not occur, do not install the Acrobat Reader, but request the free, printed product description from microTOOL.

Incidentally, should problems occur with the screen display of the document, the following procedure has worked well: Select the **Preferences/General** menu option in the Acrobat Reader **Edit** menu, and deactivate the check box for the **Use Page Cache** option.

Functional Limitations of the Demo Version

The following is a list of functional restrictions in which the demo version differs from the full version of case/4/0.

The following commands from the **System** menu are not supported by the demo version:

- Create System
- Backup System
- Restore System
- Import System
- Export System

Moreover, you can't use the demo version in a multi user session.

Another restriction is about the number of diagrams and other elements you can create with the demo version. While the full version of case/4/0 has no limit to the number of elements you can work on, the demo version is restricted to the limits listed here:

- Function Structures max. 8
- Information Flows max. 10
- ER Models max. 5
- Module Structures max. 16
- Relational Models max. 5
- Report Structures max. 3
- Data Elements max. 35
- Entity Types max. 12
- Relations max. 12

If you have any further questions, please don't hesitate to call or write us:

In Germany...

microTOOL GmbH
