WebSurfer, a performance leader, lets you browse multimedia information on the World Wide Web (WWW). WebSurfer displays hypertext documents and supports multimedia such as sound, video, and interactive graphics.

This Readme document supplements the online help file provided with the product.

Highlights

WebSurfer features include:

- * VRML support
- * Hotlist that lets you create folders for organizing documents
- * Context-sensitive menus using Windows 95-style right mouse button
- * Supports players for TrueSpeech and Real Audio. You can download them free from the Internet.
- * Tools menu that allows you to instantly access other tools without closing WebSurfer

Limitations

Windows95 Requires WSOCK32.DLL (32 bit WinSock)

This version requires a 32 bit Winsock interface. If you have an older 4.x version of Chameleon you must use either the Microsoft TCP/IP which ships free on Windows95, or have installed Chameleon 5.0, which also includes its own wsock32.dll.

WindowsNT users do not have this limitation.

ctl3d32.dll

Both the Windows95 and WindowsNT versions require this file be located in your system directory. In most cases, this file is already present. If you receive an error at launch indicating that Websurfer could not find ctl3d32.dll, you may download from our ftp site and placed in your system directory:

Windows95

ftp://ftp.netmanage.com/pub/demos/websurfer/w95_system/ctl3d32.dll
- place in "c:\windows\system".

WindowsNT

ftp://ftp.netmanage.com/pub/demos/websurfer/nt_system/ctl3d32.dll
- place in "c:\windows\system32"

These files are NOT interchangeable; you may experience problems if you try to use the wrong version for your OS.

Tools Menu

If you do not have Chameleon installed on your system, then you will not be able to launch any of the Chameleon applications listed on the Tools menu.

HTML Tag Type mailto:

Mailto: links are not supported unless you are running Chameleon 5.0 Mail.
