## Scan

Click on Scan button to start scanning process. Scanning process involves following steps.

- Scanning memory
- Scanning Master Boot Record
- Scanning Boot Sector
- Scanning files

## Selecting Drive

Default scanning drive is current working drive with all types of files. User can change the scanning drive by selecting Drive Name from Drive List Box or by giving Drive Name/Path in Configuration Window. User can also scan single file or particular directory by giving valid path in Configuration Window.

## Configuring FastScan

Here you can specify full scanning path/file name including Drive letter. Default scanning drive is current working drive with all types of files and all its sub-directories.

Select **Include all sub-directories** to scan its sub directories.

Select **Scan only executables** to scan only executables ( i.e. EXE, COM, DLL, DRV, OVL, BIN, SYS...etc.)

Click on **Auto Scan** to start FastScan automatically when Windows starts

Click on **Save Info.** button to change the default configuration.

Click on **Cancel** to restore previous settings.

## Shettys FastScan Version 2.01 - Dec 18 1996
