EXPRESS Features

The Color Filters feature allows you to adjust the colours of all objects in a file - or just a few - without breaking apart the objects: convert to grayscale, replace hue, add/remove(mix) paint are just a few of the controls.

Extrude and Warp/Perspective allow you to simulate two-point perspective and three-dimensional effects automatically. Hole-cutting allows backgrounds to show through objects. Autotrace automatically transforms bitmaps (scanned images) into editable objects.

Additional advanced features include masking and polymorphic tweening, A dynamically updated hint line displays options and identifies tools and commands. An on-line glossary and keyword search facility provide instant answers to any questions. Sophisticated editing tools, construction toolbox for precise drawing, line-to-curve conversion, and 4-colour separations make Arts & Letters EXPRESS the equal of any graphic arts task.
