

### **F6: Rename/Move file (s)**

This command allows you to rename files and directories, or to moves file to other directories or disk drives. You can rename or move the file under the cursor bar in a file panel, or you can rename a directory in a file panel. You can rename or move a group of files that you've marked with the Ins key

#### *Notes*

You'll be asked for confirmation before existing files are overwritten.

While the Move operation is in progress you will get the indication of percentage of copied bytes to the total number of bytes in the files to be copied.

Press Esc at any time to stop renaming or moving files.
