3. Remaximize after minimized install bug fixed  
4. Slideshow resume/maximize bug fixed  
5. Email Checker zero accounts resize bug fixed  
6. Local component installation now supported  
7. Download file progress added to remote component installation  
8. SMTP Authorization added to Email Checker component  
9. Drag-and-drop support added to WMP9 component  
10. Tooltips added to most components, where appropriate  
11. Dynamic generation of single newsfeed components added  
12. WMP9 auto video bug fixed  
13. Multi-user capabilities fixed  
14. Blank entry bugs fixed in several components  
15. WMP9 component last minute ActiveX crash fixed  
16. System buttons won't switch theme bug fixed  
17. Initial support for Codename: Prospect added

New Components in Version 1.1

- =====  
1. Quicklaunch  
2. Note Manager  
3. Drive Watcher  
4. News Aggregator  
5. Command Line

Component Development Kit (CDK) Changes - For Component Designers

- =====  
1. PIMSXML 2.1 spec available, adds support for:  
a. Component Minimum Requirements  
b. Restart dashboard after component install if required  
c. New download directories added  
2. LastHeight property added - mandatory usage  
3. ComponentMinimized and ComponentMaximized overrides added  
4. HaltAutoHide and ResumeAutoHide functions added  
5. **Breaking Change** - Components calling SuspendComponent and ResumeComponent overrides must now call the base class

See the Dashboard CDK Knowledgebase for full details on all available functions.
