

## ***MUST READ INFORMATION for FreeProxy php install***

This install overwrites the files:

Php5isapi.dll  
Php5ts.dll  
Php.ini

In the windows system directory. existing files, if any, are renamed with the .old extension. To recover, delete these files and reinstate the .old files.

To remove the associated registry settings, run the uninstall.

To test:

- Stop FreeProxy
- Create a IP Service with the Web Service Option. Check help for details.
- Start FreeProxy
- From the browser type `http://<hostname>/phptest/test1.php`

Where <hostname> is the name of the server running FreeProxy/FreeWeb
