

Introduction to Smart PC

Smart PC makes your PC faster, error-free and more efficient!

By a few easy steps you can make your PC run faster, cleaner and error-free with the help of a new system tool - Smart PC. The software fixes stubborn errors, cleans-up space-wasting junk and debris and optimizes Internet and download speeds making your PC more efficient and reliable. Special features of the new software ensure your personal privacy while surfing through the Web and protect your PC from information theft. Smart PC supports Mozilla Firefox, Internet Explorer, Netscape and Opera web browsers.

The software has 3 operation modes: Quick, Normal and Full varying from basic functionalities to professional one. Smart PC allows you to make undo of any repairs so that can easily recover any changes.

Besides, you needn't even manually start the application - it will do all routine job for you and save your precious time. You may be confident in keeping your data or Internet interactive exchange secure all the way. It is easy! Just set on the mode of automatic cleaning up of all your tracks.

Are you ready to set up you computer on a proper mode in a blink of an eye?

What is the difference between Smart PC and Smart PC Professional?

Smart PC Professional is different from the basic version in a greater variety of opportunities and increased capability.

Smart PC performs three main tasks: Fix, Clean and Optimize your PC.

Smart PC professional makes significant changes in the above-mentioned sections.

Fix Your PC:

Several options are added, such as control of System Sound Effects and purge of stale history concerning program operation.

Clean You PC:

Smart PC's cleanup tools will help you to clean up autofilled information including private information and the data concerning user's actions. Besides, you can view these private items before the purge.

Optimize Your PC:

A unique option was added - Boost Windows that will accelerate the operation of your PC.

The following software tools improved: log and undo, general preferences, schedule. Be a Pro: use Smart PC Professional that will fix all problems professionally.

Safety suggestions before using Smart PC

Reasonable caution should be followed when using system utility software: before manipulating any important data it is strongly advised that you have a current backup.

The software interacts with intricate parts of your computer and may encounter unexpected configurations, incompatibilities, or indiscriminate/pre-existing system corruption. The producer has researched and tested the software extensively with regards to compatibility and safety, however there may be instances where its tools will fail or lead to a loss or corruption of data. This behavior has never been encountered in our testing, but we cannot guarantee that it will not happen.

Please read, understand, and accept the software license agreement before using this product. If you cannot accept the terms in the license agreement, please do not use this software.

Fix your PC

The software's fix up features for fixing your computer problems.

Cleanup and optimization of your Windows registry!

The Windows Registry is a crucial part of your PC's operating system. Regular use of computer makes the registry fragmented and cluttered with obsolete and invalid data. The software's powerful Registry tools keep this critical part of your PC in perfect condition.

Fix registry problems

The Windows system registry gradually gets cluttered with invalid and obsolete data as applications generate references and links to files or drivers which over time become outdated. This invalid data slows Windows down and causes other problems.

The Registry Cleaner and Optimizer tool in Smart PC will clean up your registry from this invalid data. The tool can also compact your registry thus helping your computer to operate more quickly and efficiently.

Fix invalid shortcuts

You can clean up your Desktop and Start Menu by re-linking or removing broken Shortcut links. Now you can easily move programs, files, or directories to a different location and re-link their existing shortcuts automatically.

Shortcuts is a feature of the Windows operating system providing easy access to files and documents stored in your computer. The Start Menu is comprised of shortcuts pointing to various files elsewhere on your hard drives. Double clicking (or otherwise activating) a shortcut automatically opens its corresponding application or document. When the data linked to these shortcuts are moved or deleted, shortcuts point to a wrong location. These truncated shortcuts may mislead a user and only clutter your system as useless debris. Smart PC provides you with a convenient way to deal with these displaced files by scanning your system for them, and then optionally looking for the files to which they are supposed to link. The software matches existing files with their previous shortcuts and removes broken or unnecessary ones.

Purge invalid uninstaller information

Clean up flawed uninstaller information and remove useless errors when untidy software doesn't clean up after itself.

Many applications, when installed, place an entry in the "Add/Remove Programs" applet accessible in your Windows Control Panel. These entries usually reference a physical uninstallation file located somewhere on your system. Sometimes, when a user delete applications manually or the system crashes or gets corrupted, the record for these entries is very difficult or impossible to remove manually.

Smart PC provides you with a tool to easily and automatically scan your system for these invalid entries and then optionally remove their references from the Control Panel.

When you first start this tool it automatically scans for invalid uninstaller entries and lists them in its window.

Smart PC's cleanup tools will help you in cleaning up useless junk files from your system.

Clean your PC

Clean up your tracks

Operations you perform with your computer are recorded and may be exposed to unauthorized disclosure without your knowledge. The Ensure Personal Privacy tool helps you to maintain your personal privacy.

Information about your computer and yourself like the web sites you visit, the files you opened and download from the Internet, the program you run, and other actions, is automatically recorded and may be retrieved by other individuals via the web.

When you surf the web information from every website you visit is stored on your computer and recorded in various Windows locations such as temporary files, cookies, system registry and the index.dat file. Web browsers cannot provide full privacy as they do not clean up all hidden files containing data about your actions. Smart PC supports Mozilla Firefox, Internet Explorer, Netscape and Opera web browsers.

Identity and information theft (fishing and skimming) is a very serious threat to which data on your hard drive is exposed when you surf the web. Sometimes even formatting your hard drive is not enough to secure the private data. Deleting a file or directory and purging your Recycle Bin do not mean that the data is permanently and securely removed.

Documents history

Many popular applications keep record of documents opened as a list of recently accessed files. If you want to ensure privacy of your activities you should purge this list on a regular basis.

Temporary folders

OS Windows assigns temporary folders for temporary files, such as (\Windows\Temp) and (\Documents and settings\User\Temp). These files may remain in the folder after application being its source is closed. As a result, such folders accumulate temporary files of big sizes, which can and should be removed.

Temporary files

Some applications create temporary files needed for their operation. In the course of time these folders accumulate a lot of temporary files

storing the history of your PC operation. Smart PC easily and quickly removes these useless files.

I Internet cache information

When you surf the Internet your browser stores some parts of the web pages you visited onto your hard drive in order to accelerate the loading when the site is visited next time.

Gradually, these files accumulate and waste disk space as well as disclose information about Web sites you visited. Using Smart PC you can conveniently remove these files, clear the space they occupy and remove the information they expose about your web surfing habits. Smart PC supports Mozilla Firefox, Internet Explorer, Netscape and Opera web browsers

Internet cookie files

When you surf the Web an Internet site sends a cookie file which is stored on your computer. Such files contain information about your identify, preferences and even the Internet sites you visited and other personal private statistics. Originally, cookies were intended to increase the speed of re-logging to a previously visited web-site, they can also be used for other unauthorized activities like collecting such personal information as what products you have purchased over the Internet, what sites you regularly visit, where you live in, etc. By using Smart PC you can periodically remove the stored information in cookie files from your system, ensuring your privacy on the Internet.

Temporary registry values

Windows registry is a main storage of operation system settings and all applications installed. Applications very often refer to the registry and store there the history of documents opened, URLs accessed (if searching in the Web) or file names (if searching the PC itself). This information should be purged to ensure the privacy of your work.

Optimize your PC

Tweak windows settings

Fine-tune and optimize major undocumented Windows features that affect appearance, security, and performance.

Smart PC provides an easy way to make use and fine-tune hidden or unknown features in Windows. System Customizer provides access to nearly 100 adjustable items ranging from Windows' general appearance, to the boot screens that are displayed when starting and shutting down the computer, to security settings helpful for system administrators, and more. These adjustable items are broken down into relevant groups for easy access and understanding.

Windows configuration Faster Windows start-up

Startup manager lets you configure faster Windows startup speeds for the fastest performance.

Some applications are loaded when you turn your computer on along with drivers and services automatically loaded at the beginning of each Windows sessions. Relevant settings for automatic startup of selected software can be located in a program group on your Start Menu and various places in the system registry. The Windows StartUp manager tool lets you centrally manage all these settings using one single interface that make your system's boot-up process run at a maximum speed.

The first step in detecting a problem in your computer is figure out what is being loaded at the beginning of each Windows session. If you know what is automatically being loaded and what remains in memory is crucial information to be found out when something goes wrong with your computer. A fix for your computer may require as little as disabling or removing certain things that are loaded at startup. The software allows you to do this by means of Windows Startup manager.

Want more performance? Try [Smart PC Professional!](#)

Smart PC schedule

You needn't even manually start the application - preset time startup is available.

You can choose the following operation modes:

- System StartUp

With this option on the scheduler will remove the items you checked (Webpages visited, cookies, etc.) when loading Windows.

- Once

The option allows for a one-time operation at a time preset by you. If your computer is off at this time, operation will start right after it is switched on.

- Daily

Daily operation at a preset time.

- Weekly

Operation every week on selected days and at a preset time.

Important! In case of a big amount of temporary files the scheduler may cause some system operation slow-down. Please be patient!

Categories explained

Categories are major areas of interest in the registry. Below are descriptions of the available categories:

Software locations

This category confirms the availability of the entries. The information concerning application paths is located in this area in order to help the system to find and run the necessary applications.

Shared files

This category confirms the availability of the Shared files in order to aid in sharing and locating the shared files that you usually use, for example dynamically linked libraries.

ActiveX and COM components

Include the indispensable units that allow the system and the applications to operate. This category plays a crucial role in path validations and confirmation concerning the validation of CLSID entries, TypeLib entries etc. Such points as interfaces, type libraries, class identifiers, program identifiers and their references should be taken into consideration when regarding this area.

File types

The file extension is needed for the identification of the file type. Thus the system assigns applications for the files considering their type. For instance, the system recognizes the application and launches Word when you click on a .Doc-file. The File Types category confirms different pathing and references.

Fonts

This category confirms all fonts installed on the system. An entry is placed in the registry when a new font is installed on the system, so that applications like Word can use it.

Help files

The Help Files category confirms the availability of the Help files. An entry is made in this category in order to aid in sharing and locating the help files that you usually use.

Startup programs list

Windows starts up along with many applications, such as virus scanners and instant messengers. Although an incorrect uninstall may lead to the situation when non-existent applications show up when Windows starts. This category confirms the availability of the physical files.

Uninstall information

You may find many entries when you are in the "Add/ Remove Programs" area. However, there are some entries matching with the non-existent physical files. This category confirms that these entries indicate existing physical files.

Tips and tricks

Sensitive information is probably on your PC right now!

If you ever entered your credit card number, names, addresses and other personal information in a document on your computer or viewed pictures which may be considered dubious, this information may be easily recovered unless securely removed.

Theft of trade secrets and other confidential information is a widespread crime occurring every day. There are a lot of simple and accessible tools intended for the fishing of data, private correspondence, credit card numbers, personal pictures, videos, and other identifiable information which is deemed to be cleaned from your hard drive.

Regularly eliminating the traces of your actions will ensure your privacy and keep sensitive information secure.

When should I use this utility?

We recommend you to use the "Clean up your tracks" tool before shutting down your computer or leaving it unattended for a while. The Ensure Personal Privacy tool will preclude anyone from accessing any private information from your computer, such as programs you use or websites you visited.

For more information: Analyze your privacy vulnerability with new system tool: <http://www.smartpctools.com/myprivacy>

Is your PC slow at system startup?

Pay particular attention to the Start Up list, it's the list of the programs loaded in system memory at system startup, thus making your PC slow. Have a look at this list and purge the programs you don't need to have at Start Up list. Use Optimize option - Windows Configuration - StartUp List.

Benefits of registration

The main benefit is that you get the full version of Smart PC and will be able to use it without any limitations! You will make your PC faster, error-free and more efficient on a regular basis.

As a registered user, you:

- Encourage the author to further develop and improve Smart PC
- No Nag-screen
- 30-day unconditional money-back GUARANTEE
- New versions FREE upgrade
- Life-time Technical Support

How to register

You can register Smart PC right now!

Smart PC is protected by Software Passport/Armadillo Software Protection System.

Secure Purchasing Environment and Safe Shopping Guarantee !

All orders are being processed by the leading e-commerce company RegSoft.com, a Service of Digital River. RegSoft.com allows products to be securely registered or purchased with a credit card over the Internet.

All RegSoft.com transactions are protected by an extremely high level of encryption (highest allowed by U.S. law) through its partnership with Thawte.com, the largest Certification Authority worldwide.

Service provided by RegSoft.com
9625 West 76th Street, Suite 150, Eden Prairie, MN 55344 USA
1-877-RegSoft.com (1-877-734-7638)

Click here to start ordering process <http://www.smartpctools.com/order.html>

The following secure ordering options are available:

- Credit card
- PayPal
- Fax ordering
- Postal mail
- Purchase order
- Phone

On payment approval we'll send you a registration key which will remove all limitations of an unregistered version. Your registration will be valid for all future versions of Smart PC.

If you will not get your registration key within a reasonable amount of time (two business days for credit card payments or two weeks for other payments), please notify us about that! We apologize for any inconvenience caused by these delays.

Important: When filling out the order form, please double-check that your e-mail address is correct.

Thank you for support!

My Privacy

My Privacy - is a software application intended for probing the confidential information stored on your computer on its vulnerability to unauthorized access by hackers. Perhaps, you have no idea that your computer may contain your private information which you have long forgotten about. These may include your credit card information, login names, passwords as well as cookie files tracking your Web surfing habits. The My Privacy software finds all personal information and suggests its unrestorable erasure. The software also evaluates the level of your privacy protection and proposes ways to maximize it. Please bear in mind that no antispyware will save you from information theft. You need to be aware of what and where sensitive information is stored on your computer and purge it on a regular basis thus making information theft useless.

Look what kind of information My Privacy detects on your computer:

Typed URLs

My Privacy shows Internet addresses which you typed in the address string of your computer browser.

Internet Cookie files

When you surf the Web an Internet site sends a cookie file which is stored on your computer. Such files contain information about you identify and preferences. By using My Privacy you can periodically remove the information stored in cookie files from your system, ensuring your privacy on the Internet.

Private Info

My Privacy locates and classifies the following types of private data on your computer:

1. Private data of personal character
2. Login names, passwords
3. Financial information including credit card numbers
4. Other info

Upon retrieval of this information you can purge it all or delete selected parts. Then you can be sure that your data will not be a trophy for numerous hackers.

Visited Web-pages

When you surf the web information from every website you visit is stored on your computer. Web browsers cannot provide full privacy as they do not clean up all hidden files containing data about your actions. My privacy will give you a hand to handle this.

Graphics

The Temporary Internet files folder of your computer stores not only web-sites but its graphic part. Besides personal character of this information it also occupies much space on your hard drive and may build up with almost no limits. My Privacy will allow you to evaluate the volume of this information and discard unnecessary graphic files.

My Privacy analyzes information stored on your computer and suggests handling of personal data, e.g. login names, passwords, credit card numbers, Web surfing habits. If this information becomes available to aliens your goodwill may be jeopardized. Entrust your private life and business affairs to My Privacy and be sure in your invulnerability and feel safe. Let My Privacy eliminate any traces of your in most remote corners of the Internet. And do not forget about useful hints from My Privacy on building up safety of your system.

Our updated and improved edition of My Privacy runs on Windows 95/98/NT/2000/ME/XP/2003. This latest title has a free trial download available to the public at <http://www.smartpctools.com>

Safe Surfer

Safe Surfer is an award-winning tool for safe surfing in the Internet. Besides blocking annoying popup windows the software allow you to control the content of sites you visit and ensure confidential Web surfing. The software is featured by an easy user's interface and flexible adjustment: you can easily customize it to your needs.

Safe Surfer provides the following basic benefits:

Block popup windows

Safe Surfer will spare you from annoying popup windows thanks to a unique algorithm. The software enables you to manage your Web surfing by banning popups from some sites and allowing them from others thus making up editable access lists.

Control content of sites visited

Block downloading sites with obscene content! Be sure that you and your family members, children in particular, do "legitimate surfing". Just block obscene sites by naming key words.

Ensure confidential Web surfing

When your surf the Web an Internet site sends a cookie file which is stored on your computer. Such files contain information about your identify, preferences and even the Internet sites you visited and other personal private statistics. Safe Surfing provides for the privacy of you work with the Web by cleaning up Cookies, Web addresses entered and temporary files with graphics and copies of sites visited. Moreover, Safe Surfing increases free disk space.

Safe Surfer is very easy in use. The software does not need any tuning, you need not make up lists of the sites with popups and tell the software which popups to block, it detects them itself by a unique intelligence algorithm. Practically, you can install the software and forget about it as you will see less popup windows and undesirable content. You can monitor Safe Surfer operation by an indicator on the system tray. By using it you can activate and disactivate popup suppression. Just surf safely!

Our updated and improved edition of Safe Surfer runs on Windows 95/98/NT/2000/ME/XP/2003. This latest title has a free trial download available to the public at <http://www.smartpctools.com>

Customize Start Menu

Customize Start Menu is a tool for arranging menu items into groups, manage desktop icons and Quick Launch. The software has its own database of application titles and can automatically sort out hundreds of applications into target groups. The software also allows copying application icons from the Start menu to Desktop and Quick Launch, or delete them from there. All this saves your time and helps you to keep your business in good order!

The software allows working with profiles (Start Menu, Desktop and Quick Launch) of different users registered in the system.

Customize Start Menu can work in the following modes:

Groups

The software displays the whole list of applications installed into the Start menu of your computer and allows manual sorting of these applications into groups. The software has some preset standard groups. You can add your own groups to existing ones.

Desktop

The software shows the whole list of applications installed on your PC and icons as a tree in the Start menu of your computer and lets you copy application icons into Desktop. You can remove icons from Desktop.

Quick Launch

The software shows the whole list of applications installed on your PC and icons as a tree in the Start menu of your computer and lets you copy application icons Quick Launch. Various users registered in the system can work with applications and Quick Launch. You can remove icons from Quick Launch.

Our updated and improved edition of Customize Start Menu runs on Windows 2000/NT/ME/XP/2003. This latest title has a free trial download available to the public at <http://www.smartpctools.com>

Document Trace Remover

Document Trace Remover is an analytical tool for checking MS Office documents: Microsoft Word, Microsoft Excel, Microsoft PowerPoint for unauthorized private information disclosure. The software application inserts information about an initial name, (previous) authors, corporate name(s), number of saves and other built-in & custom properties, which can infringe your privacy. Document Trace Remover shall advise you of this information. Be professional in your office work and don't allow unauthorized disclosure of your private information!

Document Trace Remover provides the following basic benefits:

Analyze document

Microsoft Office documents default properties include some built-in ones, which contain a document title, author's name, template used and other custom properties.

These properties can produce some hazard for your privacy since they contain rather detailed and comprehensive information on who, when and how many times edited a document as well as information about your corporation and (or) name of your computer.

Secure document

With the help of Document Trace Remover you may replace or erase personal or business information from MS Office files, i.e. user name, initials, and company name. All you need is choosing a file or a folder and enter new variables, and Document Trace Remover shall do the rest. All preceding authors and other collateral information adjoined in editing a document will be deleted to ensure your security.

Our updated and improved edition of Document Trace Remover runs on Windows 95/98/NT/2000/ME/XP. This latest title has a free trial download available to the public at <http://www.smartpctools.com>
