

All-in-One SECRETMAKER Browser Error Handler

What is the Browser Error Handler feature?

SECRETMAKER gives you the option of allowing its powerful software to securely handle any errors that occur during your web browsing. If the URL that you specify cannot be found, or is unavailable, SECRETMAKER will provide you with relevant alternative search results based upon your query. In the event that none are available, we will provide you a search box to conveniently launch a new search for the content you were looking for. By allowing SECRETMAKER to work on your behalf in this way, you will also help prevent unauthorized or untrustworthy software from hijacking your browser when errors occur.

****IMPORTANT!!****

By enabling the All-in-One SECRETMAKER Browser Error Handler feature you can help keep Secretmaker FREE and give us the resources required to continually enhance the product for you!

How does having this feature turned ON help All-in-One SECRETMAKER and me?

When you search the web, and then click on a sponsored link of interest, an advertiser pays the search provider (i.e. Google) for that click. That search provider then shares a fraction of the revenue they receive with us. In turn, we can take that money and invest in creating a better product for YOU! That means more features, more advanced technology, and a better user experience! FREE!

Please continue to support us by turning the Browser Error Handler feature of your All-in-One SECRETMAKER product ON and and/or keeping it ON.

Why do I sometimes get browser errors while surfing the web?

Browser errors are a completely normal part of the web surfing experience. Everybody occasionally encounters them and it doesn't mean anything is wrong. Here's what it means:

The URL you requested is currently not available. This could happen for a variety of reasons, including:

- The requested file/site has been renamed.
- The requested file/site has been moved to another location and/or deleted.
- The requested file/site is temporarily unavailable due to maintenance, upgrades, or other unknown causes.
- The requested file/site does not exist.

You may have mistyped the URL. Check the address for typing errors such as ww.example.com instead of www.example.com.

If I choose not to support my All-in-One SECRETMAKER product, and would like to turn OFF the Browser Error Handler functionality, how can I do so?

Simple. You can turn on/off all features or make any desired adjustments to the settings of these features through the main interface of the All-in-One SECRETMAKER software and in the preferences menu.

- Open the main console by clicking on the product logo either on the toolbar or in your taskbar.
- Click on the “Preferences” button located on the bottom left hand side of the user interface.
- Uncheck the “Browser Error Handler” box at the bottom of the interface.
