

## **PGWARE PCMEDIK VERSION 6 HISTORY DOCUMENTATION**

This file describes issues that may affect the use of this product.

- \* 6.1.7.2008 - Fixed problem with cut copy paste context menu on registration window which would not allow user to paste the serial number into the software.
- \* 6.1.1.2008 - Minor update to address UAC problems in Vista. Also updated all copyrights within software for 2008.
- \* 6.12.24.2007 – Fixed problem with TrialPay url on uninstall screen which did not load correctly.
- \* 6.12.17.2007 – Fixed imagelist display problem with computers that have an older graphics card.
- \* 6.12.10.2007 - Enhanced performance of application running under Windows XP 64-bit and Vista 64-bit by modifying memory usage.
- \* 6.12.3.2007 – Updated authenticode code signing on the main executable; was causing some machines to report an invalid certificate was used.
- \* 6.11.26.2007 – Made changes to activation system to prevent illegal software usage.
- \* 6.11.19.2007 – Updated software installer which fixes Windows UAC Vista prompts during install and uninstall, fixes Windows 64-bit support of installation in correct folders.
- \* 6.11.12.2007 – Updated internet connection component to fix minor proxy server and local network problems when the software connects to validate license.
- \* 6.11.5.2007 – Fixed minor bug that caused the main window to display incorrect due to upgraded version of Delphi 2007.
- \* 6.10.29.2007 – Compiled software with new version of Delphi 2007 to improve Windows Vista compatibility and problems with some user controls. Also added more TrialPay conversion buying options within the software.
- \* 6.10.22.2007 – Fixed problem with compression of the main executable that reported the software as being corrupted.
- \* 6.10.15.2007 - Fixed online registration check which would check twice immediately if the serial entered was valid, fixed to only check a single time.
- \* 6.10.8.2007 – Added support for multi-core processors, software will now perform faster when used on core2duo or an amd based multi-core cpu.
- \* 6.10.3.2007 – Updated software to work correctly on tablet-based computers, fixed minor problem with registry reading on 64-bit machines.
- \* 6.9.24.2007 – Changed anti-piracy routine to forward to TrialPay. Also changed text within software that contained errors when displayed on certain computers .
- \* 6.9.17.2007 – Added support for TrialPay, also changed anti-piracy routine within software.
- \* 6.9.10.2007 – Updated list of banned serial codes within software to prevent software piracy.
- \* 6.9.3.2007 – Fixed minor problem with how software would install and run on Windows Vista 64-bit edition.
- \* 6.8.27.2007 - Fixed problem where software was not loading correctly on some computers. Also updated

software installer to newer version to fix minor installation bugs.

- \* 6.8.20.2007 – Added full support for multiuser access under Vista UAC.
- \* 6.8.13.2007 – Fixed problem with shellicon extension which showed some of the software icons as corrupted images.
- \* 6.8.6.2007 – Re-signed software with new security certificate which had expired.
- \* 6.7.30.2007 – Fixed security certificate signature on software showing invalid information. Also updated installation software.
- \* 6.7.23.2007 – Updated help file component; would not open help file correctly on some installations of Windows Vista.
- \* 6.7.16.2007 – Made slight change to software piracy detection routine within software.
- \* 6.7.9.2007 – Fixed url registration address within software, documentation and help file.
- \* 6.7.2.2007 – Added support for Windows Vista task switching feature.
- \* 6.6.25.2007 – Compiled software using updated version of Delphi 2007, fixes small bugs with compatibility of Windows common controls and security.
- \* 6.6.18.2007 – Fixed license activation bug which prevented some valid licenses from validating correctly.
- \* 6.6.11.2007 – Added code to add compatibility with Windows Defender detection.
- \* 6.5.28.2007 – Fixed small problem with software working under Vista and UAC.
- \* 6.5.21.2007 – Added list of banned registration serials into the software to prevent piracy.
- \* 6.5.14.2007 – Added error checking to fix bug which would cause software to crash on machines running on low resolution displays.
- \* 6.5.7.2007 – Fixed bug in Windows Vista which would cause cpu usage to jump to maximum when the Windows preview feature would trigger.
- \* 6.4.29.2007 – Fixed registration system, some serials would report as invalid for certain customers.
- \* 6.4.23.2007 - Fixed error in software which appeared from last update; some computers would display an invalid executable message on software execution.
- \* 6.4.16.2007 – Fixed bug with forms closing/opening incorrectly under some computers running Windows Vista.
- \* 6.4.9.2007 – Fixed problem where recent Vista changes caused application forms to lose data and cause the application to crash in some instances.
- \* 6.4.2.2007 – Recompiled software with new version of Delphi 2007, which fixes Windows Vista transition effects, flip3d and window preview. Updated graphic animation controls. Fixed Windows Help api compatibility issue with earlier versions of Windows.
- \* 6.3.26.2007 – Added Windows Vista preview window feature.
- \* 6.3.19.2007 – Fixed online registration/activation for some users that were behind proxies.
- \* 6.3.12.2007 – Updated software installer/uninstaller for Windows Vista support; would not correctly

install/uninstall on some computer configurations.

- \* 6.3.5.2007 – Fixed problem with form repaint problems with the UAC feature of Windows Vista.
- \* 6.2.26.2007 – Fixed problem with help file under Windows Vista, causing application and help file to crash.
- \* 6.2.19.2007 – Fixed software permission problems under Windows Vista not writing to certain registry entries.
- \* 6.2.12.2007 – Fixed registration problem where software would not retain customers license information upon restart of computer under Windows Vista.
- \* 6.2.5.2007 - Fixed authentication problem with software certificate and Windows UAC settings within Windows Vista.
- \* 6.1.29.2007 – Changed graphics and icon of software to support Windows Vista higher resolution capabilities.
- \* 6.1.22.2007 – Fixed minor bug where software would not work correctly under Windows Vista and a limited user account.
- \* 6.1.15.2007 – Fixed problem with online registration check causing crashes on some computers that were not updated with Windows Update. Also removed outdated/redundant documentation from the software installation.
- \* 6.1.8.2007 - Fixed problem where Kaspersky Antivirus would give a false positive report due to the compression of the main executable.
- \* 6.1.1.2007 - Updated visual components with software to fix various minor graphical/usability bugs within the software.
- \* 6.12.25.2006 - Updated installer to support Windows 64bit versions, problems with shortcut creation and installing under non-administrative users.
- \* 6.12.11.2006 - Added full support for 64bit version of Windows Vista.
- \* 6.12.4.2006 - Improved software compatibility and performance on older computers, also optimized graphics within software.
- \* 6.11.27.2006 - Fixed problem with compression and digital signature of the main executable causing program not to work on some computers.
- \* 6.11.20.2006 - Changed Vista accesslevel rights to administrator privilege to allow system level changes from the software.
- \* 6.11.13.2006 - Changed compression of the software which was causing the software to function incorrectly with some Windows 98 machines.
- \* 6.11.6.2006 - Fixed problem with the registration online check which would freeze up with Norton Firewall.
- \* 6.10.30.2006 - Modified the manifest file within software to provide elevated permissions within Windows Vista, and provide full Windows Control 6.0 features.
- \* 6.10.23.2006 - Fixed small problem with authenticode code signing and software compression errors.
- \* 6.10.16.2006 - Updated software installer to fix several problems during installation, also added full Vista compatibility with the software installer.
- \* 6.10.9.2006 - Fixed problem with installer not working correctly under Windows Vista.

- \* 6.10.1.2006 - Fixed problem where software would not work or install correctly on some Windows Vista computers.
- \* 6.9.25.2006 - Updated online software registration check. Problem within software which would cause the software to freeze when a firewall is installed on the computer.
- \* 6.9.18.2006 - Updated component within software which would recognize version of Windows installed incorrectly.
- \* 6.9.4.2006 - Fixed problem with software where Windows would not shutdown properly when software was running.
- \* 6.8.21.2006 - Recompiled installer with new version of software, also fixed problem with false positive virus warnings with F-Prot.
- \* 6.8.14.2006 - Updated authenticode certificate within software to work correctly with Internet Explorer download manager.
- \* 6.8.7.2006 - Fixed problem where the installer would set incorrect registry permissions, locking out certain Windows users from making changes to the software settings.
- \* 6.7.31.2006 - Improved software loading time, optimized start-up code.
- \* 6.7.24.2006 - Fixed problem with the compression of the software, which would show a false positive with some anti-virus programs that were unable to decompress and read the executable.
- \* 6.7.17.2006 - Fixed problem where software would not work on some 64 bit machines, removed visual component which was causing the problem.
- \* 6.7.10.2006 - Added fix for Windows Vista, software would display incorrectly when Vista glass support was enabled.
- \* 6.7.3.2006 - Fixed problem with the compression of main executable causing software to cease functioning on some computers.
- \* 6.6.26.2006 - Removed the XP Menu visual component which was causing exception errors on shutdown/exit of the program.
- \* 6.6.19.2006 - Updated graphical components for Windows XP and internet components which were causing errors on application exit.
- \* 6.6.5.2006 - Updated internet component which was causing crashing of the application on some machines.
- \* 6.5.22.2006 - Updated internal graphical components, updated help file, and updated license agreement information.
- \* 6.5.15.2006 - Removed digital signature from main executable which was causing the program to crash on some computers.
- \* 6.5.8.2006 - Fixed problem where software would crash during startup of program, also updated internal internet component.
- \* 6.5.1.2006 - Recompiled software with new version of Delphi to fix numerous bugs with file opening/closing and graphical inconsistencies.
- \* 6.4.24.2006 - Fixed problems with software piracy detection system and code signing certificate.

- \* 6.4.17.2006 - Fixed problem with registration system, which would require some users to re-enter the serial code multiple times.
- \* 6.4.10.2006 - Added fix for Windows Vista classic theme schema.
- \* 6.4.3.2006 - Fixed problem with installer which would cause some files to hang during uninstall of software.
- \* 6.3.27.2006 - Fixed several bugs within software which would cause the software to crash during installation/first run.
- \* 6.3.20.2006 - Added support for Internet Explorer 7's help file engine.
- \* 6.3.13.2006 - Fixed problem with the compression of the main executable; which would not run on Windows 95 machines.
- \* 6.3.6.2006 - Upgraded installer utility to fix various install bugs and errors.
- \* 6.2.27.2006 - Recompiled software to fix numerous graphical bugs and glitches with text displaying on lower resolution computers.
- \* 6.2.20.2006 - Fixed minor bugs within software startup, and updated anti-piracy routines within software.
- \* 6.2.13.2006 - Modified registration system which would not function correctly on some older Win 95 computers.
- \* 6.2.6.2006 - Added new file buffer tweaks.
- \* 6.1.30.2006 - Fixed problem with compression of the software executable which would trigger a false positive with some virus scanners.
- \* 6.1.23.2006 - Fixed problem with installer which prevented installation of software on some computers.
- \* 6.1.16.2006 - Updated product documentation, fixed minor graphical problems, and removed redundant code within software.
- \* 6.1.9.2006 - Updated installer package to fix minor problems with installation of software on some computers.
- \* 6.1.2.2006 - Added new memory tweaks to Windows XP based computers.
- \* 6.12.26.2005 - Updated several graphical interface components to display correctly on lower resolution computers.
- \* 6.12.19.2005 - Fixed problem with compression of main software executable, which would crash on certain computers.
- \* 6.12.12.2005 - Rewrote portions of software code to optimize speed and loading of software.
- \* 6.12.5.2005 - Fixed problem with online registration system which would crash on some computers.
- \* 6.11.28.2005 - Updated several internal components within the software to fix various screen graphical and file access bugs.
- \* 6.11.21.2005 - Fixed problem with online registration system.
- \* 6.11.14.2005 - Fixed problem with licensing system, which would not work on certain Windows 95/98 computers.
- \* 6.11.7.2005 - Fixed minor problem with graphical skin/user interface which would flicker on some slower machines.

- \* 6.10.31.2005 - Fixed problem with uninstaller, which would not work on certain Windows 98 and Me computers.
- \* 6.10.24.2005 - Updated internal components within software which fixes numerous small incompatibility issues on older versions of Windows.
- \* 6.10.17.2005 - Added new tweaks for higher resolution graphics cards. Fixed minor problem with registration system not working for some customers.
- \* 6.10.10.2005 - Fixed problem which would cause the application process to remain in memory after exit, or in some cases would crash with an access violation error messagebox non-stop.
- \* 6.10.3.2005 - Fixed minor problem with compression and loading of the main program on certain computers which would cause program to load slowly.
- \* 6.9.26.2005 - Fixed problem with registration system, which would not work on some computers.
- \* 6.9.19.2005 - Added new memory optimization tweaks for Windows XP computers.
- \* 6.9.12.2005 - Updated Windows detection routine within software. Updated graphic elements within software and within helpfile.
- \* 6.9.5.2005 - Fixed problem where software would not run on some versions of Windows 98 and Windows Me, due to compression.
- \* 6.8.29.2005 - Fixed problem with Windows XP and the Olive theme pack. Added wire-transfer, check/money order payment options.
- \* 6.8.22.2005 - Updated several URLs within software, helpfile and documentation that pointed to non-existent order pages.
- \* 6.8.15.2005 - Fixed problem with serial number system, which would prompt some serials as being invalid when they were not.
- \* 6.8.8.2005 - Fixed problem with slow mouse movement with some computers. Completely removed advertisements.
- \* 6.8.1.2005 - Fixed bug where advertisements would display for registered customers.
- \* 6.7.25.2005 - Added support for Windows Vista. Fixed problem with internal logging feature. Fixed several typos within documentation, fixed problem with help file not displaying on certain computers.
- \* 6.7.18.2005 - Added in new mouse precision tweaks for Windows XP. Fixed small bug with binary registry routine.
- \* 6.7.11.2005 - Updated internal components for application performance, updated all documents to fix urls and add new order information.
- \* 6.7.4.2005 - Fixed problem where software would not start correctly on some computers. Fixed problem where graphics would display incorrectly with certain older graphics cards.
- \* 6.6.27.2005 - Fixed problems with software protection and updated anti-piracy protection of the software.
- \* 6.6.20.2005 - Added preliminary support for Windows XP 64 bit systems, new installer allows Windows XP 64 bit machines to install software. Added several new security tweaks for Windows NT, 2000, 2003 server systems which protects against distributed denial of service attacks.

- \* 6.6.13.2005 - Fixed bug where software would report 'invalid Win32 executable' errors, also upgraded installer to newer version.
- \* 6.6.6.2005 - Made small changes to graphics and fixed several typos within the help file.
- \* 6.5.30.2005 - Changed compression level on main program file, added custom install options during installation.
- \* 6.5.23.2005 - Made changes to anti-piracy functions.
- \* 6.5.16.2005 - Fixed problem where McAfee VirusScan would show a false-positive virus detection due to compression of the main exe.
- \* 6.5.9.2005 - Changed certain memory tweaks which caused some computer screens to refresh incorrectly and causing the screen to flicker.
- \* 6.5.2.2005 - Updated online registration components which previously worked incorrectly on some Windows 95 and 98 machines.
- \* 6.4.25.2005 - Fixed problem where software displayed incorrectly on high resolution computers.
- \* 6.4.18.2005 - Modified online registration check routine which previously caused some machines to show error messages when no online connection was available.
- \* 6.4.11.2005 - Added new memory tweaks for Windows 2000 and Windows 2003.
- \* 6.4.4.2005 - Fixed problem where the main program would crash on certain computers, due to compression of the executable/program.
- \* 6.3.28.2005 - Added new tweaks for Windows XP which modifies desktop refresh rate.
- \* 6.3.21.2005 - Fixed problem where installer would not install certain files; improperly warning that the file is already opened/running.
- \* 6.3.14.2005 - Fixed problem with online registration check which would cause a separate process to open and never close.
- \* 6.3.7.2005 - Fixed problem where writing to the registry on Windows 2000 with a limited user account would crash the software.
- \* 6.2.21.2005 - Updated installer which would cause problems on certain machines.
- \* 6.2.14.2005 - Fixed problem within installer which crashed on certain computers with non-standard configurations.
- \* 6.2.7.2005 - Added memory optimization tweaks for all versions of Windows
- \* 6.1.31.2005 - Added file buffer I/O tweaks. Changed trial features of software, software will now expire after 28 days.
- \* 6.1.24.2005 - Updated internal components and setup/installer.
- \* 6.1.17.2005 - Fixed problem where screen would not refresh correctly with certain tweaks on older 3d graphic cards.
- \* 6.1.10.2005 - Made several minor text changes to documentation and helpfile. Made changes to text within software which displayed incorrectly on some international computers.

- \* 6.1.3.2005 - Made corrections to typos within documentation, made changes to graphical problems on main form.
- \* 6.12.27.2004 - Fixed problem with software closing; on certain machines software would cause error messages during Windows shutdown.
- \* 6.12.20.2004 - Made changes to anti-piracy functions.
- \* 6.12.13.2004 - Made small changes to online check routine both on server and client side to fix problems with some computers and software registration check.
- \* 6.12.6.2004 - Made minor graphical/functional changes to a few forms, fixed problem with software startup, removed portions of online check routine.
- \* 6.11.29.2004 - Added more file I/O tweaks for Windows XP, 2000 and 2003.
- \* 6.11.22.2004 - Minor graphical changes with main form, fixes problems with registration routines and piracy detection.
- \* 6.11.15.2004 - Added support for Intel and AMD 64 bit processors.
- \* 6.11.8.2004 - Modified and enhanced anti-piracy measures within the software.
- \* 6.11.1.2004 - Fixed another problem with the authenticode signatures, verisign systems were temporarily down causing the timestamp not to be written to the installer file.
- \* 6.10.25.2004 - Fixed problem where on systems which updated to Windows XP SP 2 the software would crash and terminate unexpectedly.
- \* 6.10.18.2004 - Fixed authenticode date/time stamp problem on the installer. Also removed compression on main executable as it caused crashes/slowdowns on early versions of windows.
- \* 6.10.11.2004 - Added new memory optimization tweaks for all versions of Windows.
- \* 6.10.4.2004 - Modified all urls within software to account for our software affiliate program.
- \* 6.9.27.2004 - Minor update to address piracy; banned several illegal serials. Also used new version of setup installer which fixed problem with users which did not have administrative rights for their user accounts under NT, 2000, 2003 and XP.
- \* 6.9.20.2004 - Fixed problem with versions of Windows 95, 98 and Me where devices would be erased from system due to certain tweaks made.
- \* 6.9.13.2004 - Added more tweaks for all versions of Windows regarding video framerate and video memory utilization.
- \* 6.9.6.2004 - Fixed problem where on certain versions of Windows the executable when compressed would cause an error and not run. Compression disabled on all future releases.
- \* 6.8.30.2004 - Fixed problem with game Doom 3, which would cause screen to lag and mouse movement to freeze up.
- \* 6.8.23.2004 - Fixed problem where software on certain Windows 95, 98 and Me computers be recognized as corrupted and not run at all.
- \* 6.8.16.2004 - Added secure digital certificate to installation program to confirm to users the download is safe and has not been modified during download.

- \* 6.8.9.2004 - Used new setup installer as well as compressed exe to be smaller; resulting in more compact distribution for software.
- \* 6.8.2.2004 - Fixed problem with registry setting which was misspelled thus causing that tweak to have no effect on the system.
- \* 6.7.26.2004 - Added more tweaks for video memory for Windows XP, 2000 and 2003 users.
- \* 6.7.19.2004 - Added tweaks for video memory, and fixed problem which caused problems for Windows XP SP 2 users.
- \* 6.7.12.2004 - Fixed problem with installer which would cause files already on the system not to update when new version was installed. Updated to new version of installer as well.
- \* 6.7.5.2004 - Added more file access tweaks for Windows XP, 2000 and 2003.
- \* 6.6.28.2004 - Added new tweaks for file access, read/write/open; which should improve file access times.
- \* 6.6.21.2004 - Minor update to address anti-piracy: banned several illegal serials.
- \* 6.6.14.2004 - Added new screen refresh/repaint tweaks, also added cpu priority tweaks for Windows XP, 2000 and 2003.
- \* 6.6.7.2004 - Made small changes to software to fix problem with low resolution computers, as well as made small changes to license agreement.
- \* 6.5.31.2004 - Fixed problem with executable compression which would cause software not to run on certain Windows 95 and 98 machines. Also new version of installer used which may fix any installer bugs/problems.
- \* 6.5.24.2004 - Added new memory tweaks for Windows XP, 2000 and 2003.
- \* 6.5.17.2004 - Added several new optimizations for Intel processors and Windows XP.
- \* 6.5.10.2004 - Fixed major problem which did not allow multiple computer users from accessing the software correctly. Also updated installer to force the computer administrator to install the software.
- \* 6.5.3.2004 - Added new memory optimization tweaks for Windows XP, 2000 and 2003.
- \* 6.4.26.2004 - Compressed executable down another 50 kb to reduce entire build size of distribution.
- \* 6.4.19.2004 - Added new memory and file optimization tweaks for Windows XP, 2000, 2003 and 98.
- \* 6.4.12.2004 - Added several new file I/O tweaks for Windows XP, 2000 and 2003. Added routine to notify of software updates when software becomes expired/old as well.
- \* 6.4.5.2004 - Updates to anti-piracy measures, updates to registration check which would not function when licenses over 15 copies were issued and updates to the software license agreement.
- \* 6.3.25.2004 - Made changes to anti-piracy measures within the software.
- \* 6.3.18.2004 - Updated internal components for GUI - Windows XP theme component.
- \* 6.3.11.2004 - Administrative release which bans several illegal serial numbers from the software from functioning. Updating of license agreement.
- \* 6.3.3.2004 - Added more file enhancement tweaks for Windows 2000, XP and 2003.

- \* 6.2.25.2004 - Added new file reading/loading tweaks for Windows 2000, XP and 2003. Also new installer used to reduce overall distribution size.
- \* 6.2.17.2004 - Added support for larger font dpi resolution computers, where previously application would not display correctly on any dpi above/below 96 dpi.
- \* 6.2.10.2004 - Added new tweaks for Windows 2000, XP and 2003, which modifies Windows animation settings on lower end hardware.
- \* 6.2.2.2004 - Changed pricing, made further changes to the license agreement and some small gui changes.
- \* 6.1.26.2004 - Made small changes to the gui, also made some changes to the license agreement and help file, and added list of contributors to the software.
- \* 6.1.19.2004 - Sixth major version of PCMedik released. Major changes to gui, order form and documentation all made.
- \* 5.1.5.2004 - Added new tweaks for Windows 2003. Fixed problems with registration routine and made minor graphical changes/additions.
- \* 5.12.29.2003 - More modifications to registration routine to thwart piracy.
- \* 5.12.21.2003 - Fixed registration routine to thwart piracy.
- \* 5.12.15.2003 - Fixed major problem where on some Windows machines after using the RESTORE feature Windows would not boot up again without a registry key change.
- \* 5.12.8.2003 - Added cpu cache tweak for Windows 95 and 98 machines and AMD processors.
- \* 5.12.1.2003 - Added fix for mouse/touchpad problems with some Toshiba computer/laptops.
- \* 5.11.24.2003 - Added several file I/O operation routines in for Windows 95 and Windows 98.
- \* 5.11.17.2003 - Changed compression level of exe to reduce file size/footprint - to make the setup/package smaller in size.
- \* 5.11.10.2003 - Another fix for the registration routine, problems with Japanese/Chinese characters wouldn't work properly with the serial/name system. Also repackaged with new installer setup package.
- \* 5.11.3.2003 - Fixed problem which would cause a crash to occur on older model computers with Windows 95/NT and without Internet Explorer 4 or higher installed.
- \* 5.10.27.2003 - Fixed problems with setup installer displaying incorrect/invalid language on machines that were not setup to display English as primary language.
- \* 5.10.18.2003 - Fixed registration system to block more illegal usage.
- \* 5.10.14.2003 - Added routines for usb device detection and troubleshooting, also added usb buffer reading/writing optimization for Windows Me.
- \* 5.10.8.2003 - Added several settings for display device, fixed problems with lower 256 color and lower displays for Windows 95, 98 and Me.
- \* 5.10.1.2003 - Fixed another issue with Windows XP and a few registry entries.
- \* 5.9.28.2003 - Fixed problem with two registry entries not being removed correctly on some systems when

RESTORE was used.

- \* 5.9.25.2003 - Fixed problem with PCMedik and Norton software in regards to legacy 8.3 filenames.
- \* 5.9.22.2003 - Fixed problem with registration window on closing would crash on some computers.
- \* 5.9.21.2003 - Fixed problem with Windows Thumbnail preview optimization setting from previous release of PCMedik.
- \* 5.9.20.2003 - Added optimization for Windows XP/2003 thumbnail previewer. Added optimization feature to prevent missing shortcut long lookups for Windows XP/2003. Added feature for Windows pre-fetcher service for XP, 2003 machines which loads applications/files faster. Added feature to clean up virtual cache on shutdown for Win 98, Me machines. Cleaned up internal code and re-organized portions of code within PCMedik.
- \* 5.9.12.2003 - Added several routines for Windows 95, 98, Me with memory management. Added file size limits and legacy Windows removal routines within Windows NT, XP, 2000 and 2003.
- \* 5.9.6.2003 - Changed/optimized code to handle Windows exception errors under Windows 95, 98 and Me.
- \* 5.9.2.2003 - Changed memory allocation buffers to lower limit.
- \* 5.8.26.2003 - Fixed problems with gui and lower resolution monitors.
- \* 5.8.21.2003 - Modified system file buffers to fix error with really large files (> 3 Gb), fixed issue with a Windows Update feature overwriting some settings.
- \* 5.8.17.2003 - Fixed online check routines and users with dialup connections being constantly prompted to connect.
- \* 5.8.16.2003 - Fixed problem with cpu priority and Windows 95 machines, added fix for older dos/console applications and added file cache optimizations for Windows XP, 2000 and 2003.
- \* 5.8.12.2003 - Added memory optimization routines for Windows 2000, XP and 2003.
- \* 5.8.6.2003 - Fixed another bug with the registration system.
- \* 5.8.4.2003 - Fixed problem within registration routine and math decimal point international issues.
- \* 5.7.31.2003 - Added several routines for Windows 98 only in regards to page file limits, boot sequence and event timers.
- \* 5.7.25.2003 - Added several cpu, software and system animation routines for Windows NT, 2000, XP and 2003.
- \* 5.7.21.2003 - Added several routines for memory usage.
- \* 5.7.18.2003 - Fixed problems relating to recently Win 2003 support added in.
- \* 5.7.13.2003 - Added Windows Server 2003 support and configuration routines.
- \* 5.7.11.2003 - Removed old legacy code and finalized several routines previously added in as testing code.
- \* 5.7.7.2003 - Fixed major problem where display device would set back to PCI VGA mode and not allowing it to change back. Now has been fixed.
- \* 5.7.4.2003 - Minor graphical changes, icons, text, screens.
- \* 5.7.2.2003 - Minor graphical changes, such as mainicon and aboutscreen image.

- \* 5.6.30.2003 - Added system enhancements for Windows 95, 98 and Me.
- \* 5.6.24.2003 - Added system enhancements for Windows XP.
- \* 5.6.18.2003 - Fixed problem where on rare occasions a list out of bounds (-1) error would occur.
- \* 5.6.12.2003 - Added memory optimization routine for Windows 95/98/Me. Also added routine to disable NET SEND commands on Windows NT/2000/XP which stops marketers from showing popups on your computer.
- \* 5.6.6.2003 - Mostly cosmetic changes to the interface of Throttle.
- \* 5.6.3.2003 - Fixed problem with log file growing too large and eventually causing PCMedik not to function.
- \* 5.5.24.2003 - Added new routine for Windows XP which enhances registry access speed.
- \* 5.5.16.2003 - Added several new optimization routines for Windows 95, 98, Me.
- \* 5.5.10.2003 - Fixed problem on lower spec computers where on startup of PCMedik an error 'Buffer overflow would occur'.
- \* 5.5.1.2003 - Recompiled and removed exe compression.
- \* 5.4.27.2003 - More changes to MaxFileCache settings made. Should be completely correct now.
- \* 5.4.22.2003 - Major fix added for File Cache settings, previous values were completely incorrect and have now been fixed.
- \* 5.4.20.2003 - Removed some old legacy code from previous versions of PCMedik. Fixed gui bug which occurred on lower resolution monitors. Also added several new optimization routines in for Windows XP and Windows 2000.
- \* 5.4.16.2003 - Small fix to decrease distribution file size, as well as add compression.
- \* 5.4.8.2003 - Fifth major version of PCMedik released. Major changes to gui as well as core engine of PCMedik rewritten from the ground up. Added numerous new enhancements for Windows 2000/XP.
- \* 4.3.27.2003 - Final version of PCMedik 4. Finalizes all bugs and error fixes. PCMedik 5 soon to be out!
- \* 4.3.19.2003 - Fixed minor typo within help file from last release.
- \* 4.3.13.2003 - Small changes to the registration routine.
- \* 4.2.25.2003 - Interm upgrade. Added several banned users into copy protection.
- \* 4.1.10.2003 - Modifications to registration system to fix problems with older keyfiles.
- \* 4.12.23.2002 - Recompiled with Delphi 7 to decrease file size and memory footprint.
- \* 4.12.21.2002 - Removed compression from executable. Was causing icon cache problems with some computers. Also now using Inno Setup 3 as default Installer.
- \* 4.12.18.2002 - Added several new system enhancement routines.
- \* 4.12.9.2002 - Updated url's within executable to reflect new distributor.
- \* 4.12.2.2002 - Changed distribution over to setSystems. Updated all documentation and files to reflect new distribution partner.

- \* 4.11.29.2002 - Fixed small gui related bugs within about screen.
- \* 4.11.25.2002 - Fixed problems with reboots on start-up of software.
- \* 4.11.13.2002 - Fixed registration problem with multi-license purchases.
- \* 4.11.10.2002 - Added new routines for Windows NT, 2000 and XP computers.
- \* 4.11.7.2002 - Bug with registry write fixed.
- \* 4.10.31.2002 - Minor bug fixes.
- \* 4.10.25.2002 - Using new installer, added Mutex to register PCMedik into Windows to prevent install & uninstall without closing previous version if opened.
- \* 4.10.21.2002 - Added more routines for Windows 2000 and XP users. Also addresses small icon cache problem occurring on Win 9x machines.
- \* 4.10.16.2002 - Fixed registration algorithm problem.
- \* 4.10.10.2002 - Added additional system enhancement routines.
- \* 4.10.5.2002 - Minor GUI enhancement/fix.
- \* 4.9.27.2002 - Fourth major version of PCMedik released. Numerous new enhancements added in for Windows 95/98/ME. Also added twice as many enhancements in for Windows NT/2000/XP. Added more crash protection as well as logging/reporting procedures in. Set autoreboot mode on in case a crash does occur. New memory management routines added in to control crash/system performance issue bugs. Rewrote core code to better support Windows XP Home and Professional gui.
- \* 3.9.2.2002 - Added approx. 10 more system enhancing routines which cover all versions of Windows. Changed exe compression for PCMedik to run slightly faster.
- \* 3.8.5.2002 - Re-addressed KERNEL32.DLL issues which appear when ZoneAlarm Pro 3 is installed.
- \* 3.7.4.2002 - Changed distribution over to RegSoft. Updated all documentation and files to reflect new distribution partner.
- \* 3.4.10.2002 - Added new system routines for Windows NT/2000 and Xp computers.
- \* 3.3.17.2002 - Fixed XP style compatibility issues and fixed the 'PCMEDIK.EXE has caused an illegal page fault in module KERNEL32.DLL' error message that appeared on computers which had ZoneLab's product ZoneAlarm installed.
- \* 3.3.8.2002 - Fixed problems where scanner would not close on some computers if an error was encountered.
- \* 3.2.24.2002 - Fixed 'access violation' bug which occurred on some computers due to the new scanner feature added into version 3.
- \* 3.2.22.2002 - Third major version of PCMedik released. Hundreds of new modifications added into this new version, as well as windows reboot problems once again fixed. New system analyzer added into PCMedik to query devices and software and make modifications as appropriate. Updates to helpfile which address the many changes PCMedik is making to the computer, added in.
- \* 2.2.17.2002 - Fixed vcache settings for machines with large quantities of RAM/Memory. Also added in new

settings for Windows 95/98/Me computers and a new setting for Windows XP machines.

- \* 2.2.6.2002 - Added several new Windows settings and fixed small bugs.
- \* 2.1.4.2002 - Fixed internal bugs and added Office menu controls in.
- \* 2.12.1.2001 - Fixed registry bug and typo within the help file, also fixed reboot bug within Win 32 systems.
- \* 2.11.25.2001 - Fixed small bug where Operating System choice was not saved into registry.
- \* 2.11.22.2001 - Changed all of the internal icons to Windows XP and multi-resolution compatible.
- \* 2.11.18.2001 - Second major version of PCMedik released. Major improvements to the internal core and GUI of PCMedik have been made. Fixed bug with Windows not rebooting under Windows NT/2000/XP. Also added new performance routines for Windows NT/2000/XP.
- \* 1.9.20.2001 - Fixed small bug with dlls, also added new system performance routines for Windows NT/2000/XP.
- \* 1.8.20.2001 - Fixed small bug where application would crash on exit sometimes.
- \* 1.8.19.2001 - Original public release of PCMedik.
