FileMaker Pro Server 3.0

Improved Features

▶ Faster multiuser performance

▶ Centralised network management across AppleTalk, IPX/SPX and TCP/IP networks

▶ Relational

▶ Optimised indexing and record locking

▶ Supports up to 100 users

▶ Visual file and network tools

The ease of use and flexibility of FileMaker™ Pro software has made it the number 1 database solution for Macintosh and Windows users and workgroups. And now there's FileMaker Pro Server 3.0 – the powerful relational network server version of the program – which delivers dramatically faster multiuser performance and new centralised network management tools across AppleTalk, IPX/SPX and TCP/IP networks.

Designed for demanding cross-platform businesses of all sizes, FileMaker Pro Server is a high performance relational database engine that accelerates FileMaker Pro operations over a network. With optimised indexing and record locking, workgroup users can realise significant performance gains. With its unique 'multi-protocol' feature, users on AppleTalk, IPX/SPX and TCP/IP networks can access hosted databases simultaneously. FileMaker Pro Server offers increased scalability, supporting up to 100 simultaneous users per server, as well as hosting up to 100 database files simultaneously.

FileMaker Pro Server also offers network administrators powerful, new visual file and network tools to centralise file access, monitor server and network activity, send messages to connected guests, and even open and close groups of files automatically. And FileMaker Pro Server is easy to maintain, with automatic back-up scheduling, up-to-the minute Server Log File and more.

Now you can have your FileMaker Pro databases running faster and available to more network users with the power of FileMaker Pro Server.
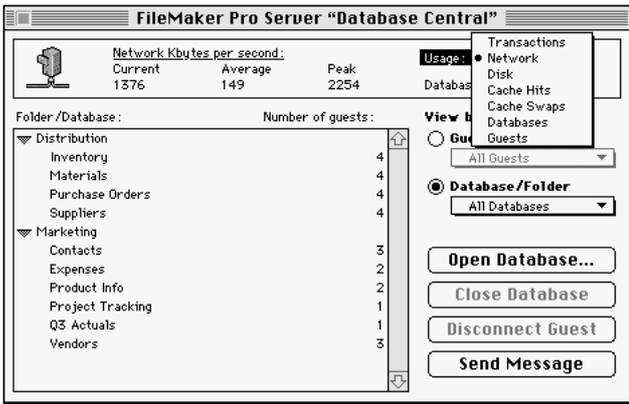

**Claris. *Simply powerful software.*™**

Client/Server file sharing for faster multi-user performance.

FileMaker Pro Server 3.0

From the Administrator window, network administrators can monitor network activity, open and close databases, and send messages to guests. Users and database files can be viewed in several different ways, depending on an administrators specific needs.

Setting preferences enables any configuration of FileMaker Pro Server features including user and file capacity, administration security, and network identification.

Schedule daily backups on your open database with ease, or run AppleScript applets.

System Requirements

▶ Any Macintosh (68030 or higher) or Power Macintosh computer

▶ 8MB memory; 1.44MB floppy drive; a hard disk drive

▶ System 7.1 or higher

▶ Thread Manager (included with FileMaker Pro Server)

▶ TCP/IP networking requires Open Transport 1.0.8 or greater

▶ Multiuser Client Server file sharing support:

▶ Macintosh to Macintosh networking: AppleTalk, IPX/SPX, or TCP/IP

▶ PC to Macintosh networking: IPX/SPX or TCP/IP

Features / Benefits

Features	Benefits
Enhanced Performance	
Multi-protocol	Host databases for Macintosh and Windows users running AppleTalk, IPX/SPX, and TCP/IP (native Power PC networking with TCP/IP via Open Transport 1.0.8 or greater)
Optimised Record and Index Locking	Reduce network traffic and improve guest performance
Multi-threading	Process multiple tasks simultaneously
Asynchronous File I/O	Accelerate disk access (requires Power Macintosh, Macintosh Quadra A/V, or other asynchronous I/O compatible hardware)
Scalable	Supports up to 100 users per single file; hosts up to 100 files per server
Anticipatory Cache	Ensure required data is in memory for faster access
Easy Administration	
Usage Display	Monitor server and network activity from a usage menu
Disconnect Users	Disconnect unresponsive users who forget to close a file or are away from their workstation
Remote Administration	Perform administration functions from remote machines anywhere on the network
Automatic Log File	Review and/or archive network file operations on screen or via hard copy
Ease of Use	
Simple Installation	Host AppleTalk, IPX, and TCP/IP guests immediately without requiring any revision to database solutions
Automate File Opening	Reduce set-up time and maintenance
Special Icon	Network icon identifies server files instantly
Fully Compatible	
FileMaker Pro Compatibility	Compatible with relational FileMaker Pro 3.0 for Macintosh, Power Macintosh, and Windows 95
Macintosh Support	Switch or upgrade servers at CPU level at any time with full support for Power Macintosh and Macintosh computers
