

Introduction to Mountain High Maps version 2.5

MacUser Editor's Choice Award 1996,
Best New Graphics Resource

Mountain High Maps is the world's only CD-ROM collection of high-resolution relief maps of our planet's continents and ocean floors. Each of the 78 stunning, fully-customisable relief maps is presented in no fewer than seven styles, including five colourised versions of every single map, spanning every corner of the Earth! Engineered to professional cartographic integrity, this easy-to-use resource delivers more quality, more detail, more accuracy and more flexibility than ever before.

The result of 20 years of intense research and highly-skilled cartographic engineering, these special 3-D maps originally appeared in The Readers Digest Great World Atlas and Hammond Inc's Panoramic World Atlas, and so their integrity is unchallenged. Each map is constructed from intricate survey data to recreate exacting land and ocean contours which, lit from strategic cardinal points, give a true and accurate picture of the terrain they represent, providing superior and more striking views than comparable satellite images.

The very high resolution is also unprecedented in digital media: Mountain High Maps delivers up to ten times the resolution of other world mapping products. The maps are in industry-standard formats and can be used by

paint, draw, page layout and word-processing applications - there's no need for you to learn new software! Mountain High Maps is a unique and uncomplicated way to dramatically enhance your map graphics be they for print, multimedia, broadcasting, movie production or the internet.
