What Does It Do?

The CD Label Printer Pro prints labels for compact disk jewel cases on plain paper. Simply cut out the labels and fold them into a CD case. It is ideal for creating computer CD labels, music CD labels, professional audio CD labels, and customized CD labels. The CD Label Printer Pro supports different font, style, size, justification, and color control for the text on the front and back labels. Pictures can also be added to the labels, and can be scaled and repositioned.

What Does It Need?

The CD Label Printer Pro requires any Mac or PowerMac running MacOS 7.0 or higher. If you have a system that supports color, and if you have a color printer, the CD Label Printer Pro will print high quality graphics on your label in full color at any resolution. A Windows 95 version is also available.

How Do I Register?

To obtain the fully functional version of the CD Label Printer Pro that does not print the DEMO notice on the labels, point your favorite web browser to <http://www.aspenmall.com/software/> where you can purchase and immediately download the fully working copy for just US \$7.50 without the inflated costs of packaging or distribution. Visa/MC accepted on our Secure Server Payment Page.

You may also use the enclosed registration application to order by email or to send in your order via the postal service.

Special Thanks to...

I would like to thank all of the registered users of the CD Label Printer Pro for supporting the development of this program. I'd also like to thank the following programmers and testers for their invaluable help:

[Rob Hagopian](#) for debugging.

[Alessandro Levi Montalcini](#) for helping with the color menu code.

[Stephen Reiss](#), for designing the CD Label Printer Pro logo.

[Michael Johnson](#), [Marcy Kulic](#), [Aaron Dietrich](#), [Charlie Jarowski](#), [Donald Card](#) and especially [Mark Jaffe](#) for beta testing and feature suggestions.
