

Adding a Movie

Choose **Get Movie** from the **Page** menu to add movies to a page. You may have multiple movies on a single page. The movies are layered on top of each other as you add them to the page. Simply clicking on a movie brings it to the front of the movie layer and makes it the active movie. (For more about the active movie, see [Activating a Movie](#).) The movies layer is in front of that of the text boxes and behind that of the hot spots.
