Adding a Hot Spot

A hot spot is an area that you define on a page that to reacts to a user's click.   You can also define the action that the hot spot performs in response to the click. (e.g. play a sound, go to the next page, etc.).

You can add a hot spot to a page by choosing Add Hot Spot from the Page menu.   There is a sub-menu that lets you choose to define a shape as Rectangular, Round or Freeform.

When rectangle or round is selected, the cursor will turn into a cross.   Position the cursor where you want the top, left corner of the rectangle (in the case of a round shape, the top, left corner of an enclosing rectangle) and click and drag out the box or sphere.

For a freeform shape the cursor will turn into a pencil.   Click and hold down the mouse button. Draw any shape.   The shape is defined when you let go of the mouse button.

To view all the hot spots on a page press the control key or caps lock key.   (See "Control Key" and "Caps Lock" under "Special Key Functions".)
