Assigning an Action to a Hot Spot

You can define the action of a hot spot at any time in the Hot Spot Info dialog. Choosing Hot Spot Info from the Page menu when a hot spot is selected, or double clicking on the hot spot or, will bring up this dialog.

There is a pop-up menu in the Hot Spot Info dialog that allows you to choose from many possibilities.   Among these are: Next Page, Previous Page, Print and Run Slide Show. Below these choices is a list of the current pages.   Selecting one of these will cause that page to be brought up when the user clicks the hot spot.   This list is dynamic and will change as you add or delete pages.

When a page title is selected, the hot spot will always go to this page when clicked, even if the page is renamed or repositioned in the page list.

The Next Page and Previous Page options bring up the next or previous page relative to the page on which the hot spots is.   This is always relative to the current positions of the pages in the page list.
