Fade Between Pages

Fading between Full Screen Pages

Fade Between Pages is now available from the Contents menu, the "Project Info" dialog and as an option when creating ProViewers.

When enabled, a short fade down followed by a fade up occurs when opening or switching between pages.
This option is available from the CONTENTS menu while "Full screen" is selected.   This is true for both ProView and ProViewers.   You may also choose this as a preference for your project in the "Project Info" dialog.

NOTE: FADES ONLY WORK IN FULL SCREEN MODE.

Fading in Slide Shows

"Fade Between Pages" may be used while running a slide show independent of the selection in the normal mode.

This option is available for both ProView and ProViewers.
A ProViewer created as "Slide Show Only" may also implement this feature.
