

Import JPEG

Adding JPEGs

Images compressed and saved as JPEG files may now be added directly into ProView the same way you would add any PICT file.

This feature also works with Drag and Drop.

Don't Recompress JPEGs

When creating ProViewers, there is now a new option - "Don't recompress JPEG files." Selecting this option will add previously compressed JPEG images to the ProViewer without recompressing them. This both speeds up ProView as well as giving you the option to use different amounts of compression on your images.

NOTE: If the picture is resized in ProView, this option is ignored.
