

TILED BACKGROUND

With this feature you can repeat the back-most image to create a tiled background.

To use this feature, bring up the "Page Info" dialogue box by either double clicking on the background or choosing "Page Info" from the **Page** menu or toolbar when no other objects are selected. Check the "Tile background image" check box and click OK. The image in the back-most layer will then repeat itself to fill the screen and create a tiled effect.

You may select another image and use the **Move to Back** feature to swap the tiled background image. In full screen mode, the tiled background will fill the screen no matter how big the monitor.

To Turn off the Tiling, bring up the "Page Info" dialogue box and uncheck the "Tile background image" box.
