

AUTO START MOVIE

ProView now allows you to have movies automatically play as soon as the Page is opened.

To use this feature, bring up the "Page Info" dialogue box by either double clicking on the background or choosing "Page Info" from the **Page** menu or toolbar. Check the "Auto Start First Movie" box to initiate this function.

If there is more than one movie on a page, the auto-start movie will be the last movie that was selected before saving the page.

HINT: Use the loop movie feature along with the Auto Start First Movie function to create an automatic continuous animation directly on your page.
