

### FontLINK Conversion:

FontLINK will determine where the file you dragged onto it came from, and use this directory as source directory. The files which FontLINK understands are listed on the left side of the window.

In the example above we selected the file bord.eps and added it to the joblist with 'Add selected'.

After selecting 'Start' FontLink will find the required fonts and include them in the EPS.

This is all you need to know and we wish that you can use this application with as much fun as we have.

And we support many languages:
