

Wacom Tablet Installation

The installer will install the Wacom Tablet driver and control panel into the Control Panels folder of the currently active system disk. It will also install any required system patches. Click the CUSTOMIZE button to select a custom installation.

After installing, shut down your computer, attach your tablet, then restart. The driver will be loaded when you restart.

Note: It is important that you quit all other applications before installing under MultiFinder on System 6.

Note: Some virus-protection programs (GateKeeper, SAM, Virex, etc.) may warn you about some of the operations performed by the installer. This is normal. You should always give the installer permission to perform the requested operation. You may find it easier to disable any virus-protection programs before running the installer.
