

### About this patch...

This patch updates Speed Demon 1.0, 1.1, 1.2 or 1.2.1 (on-line distribution) to Speed Demon 1.2.2. It will not update the CD-ROM version of Speed Demon. If you obtained Speed Demon from a CD that came with a magazine or a shareware compilation, you will need to use the "Speed Demon CD 1.2.2 patch" application instead.

#### What's fixed in version 1.2.2:

- The "Time Expired" message will not appear upon completing a track level.
- We had the car leaning correctly the first time. It's back to normal now.

#### What's fixed in version 1.2.1:

- Fixed potential problem in detecting multiple CH Products / JoyManager devices
- Added weapons option; you may now play without them
- Increased radar range in non-demolition derby scenarios
- Labeled the "difficulty" control more accurately
- Added support for the CH Pro Throttle and for reverse/drive switches on CH / Joymanager devices that may support them.
- Fixed a possible conflict with MacOS 8 - if the interface buttons don't appear, this should fix it.

#### What's fixed in version 1.2:

- Added preferences setting for steering sensitivity (defaults to setting from previous versions.) Many thanks to Jonathan E. Durkee of Red Planet Software for his freeware slider control "RadSlider."
- Moved the difficulty selection to the preferences dialog
- The difficulty selection now affects the curviness of the road as well as your time limits (defaults to setting from previous versions)
- The car now leans out of curves instead of into them
- Fixed a refresh problem in the preferences dialog
- Fixed a potential problem with the registration system

#### What's fixed in version 1.1:

- Horrible things happened to the graphics on 601 and 603 based machines using the default preferences settings on monitors greater than 640x480. Fixed.
- The turning radius has been decreased in the demolition derby.
- The enemy cars are easier to kill in single-player demolition derby games.
- Collision detection in the demolition derby has been improved.
- An extra sound channel was added.
