

The Red Eye

You Have Never Seen This in a Public Airport

727 Time

osition yourself to get a good, full, wide-angle view of the 727 from the ground. Now it seems as if you are looking at it while walking up towards it, right? Good. Give it two Mavericks, delayed by about .75 seconds. Watch it spin and roll! If you are lucky, it will roll over backwards and smash down on its back. Imagine that in a public airport!

Galaxy Crash

ick one of the C-5's. Follow it from behind. Pickle it, and give it 2-3 Maverick shots, delayed by about a second. Watch it flip!

miracle Landing, Part II

osition yourself behind the first C-5, the first one to land. Follow it down to land. When it starts getting really close to the runway, give it 1-2 Mavericks. It will spin sideways and skid its way down the runway to a halt.

hen I did it, it skidded down its merry way to the middle of the runway where it just halted and didn't move. Presumably the pilot was dead or injured. But, then the second Galaxy landed. When it got too close to the first one, it tried to break up, but it didn't have enough airspeed. It tried to brake, but it was too late. They slammed into each other, creating an enormous explosion that all the other planes fell into as they took off.

727 Trouble

osition yourself behind the 727 as it lines up on the runway. Speed up as it speeds up, and follow it to takeoff. Right after it gets around 50 feet of altitude, give it two Mavericks, with a delay between them. Because of its light structure and slow airspeed, it will do a lot more careening in the air than some of the bigger jetliners.
