Conflict Catcher™ 4.0.3 Update v2

This will correctly update your previous version of Conflict Catcher 4 to v4.0.3. This update includes:

• New Control Panel
• New Extension
• New Reference Library

This update will not affect your customized Sets or Links.   With the updated Reference Library, you will be presented with the option to update your built-in Sets and Links.   We recommend that you select this option.

To apply the update:

1. Restart your computer with extensions off.
2. Double click on the "Conflict Catcher™ 4.0.3 Updater" file.
3. After reading the Readme, click "Patch" to perform the update.
        Locate the "Conflict Catcher™" file in the Control Panels folder.
        Locate the "Conflict Extension™" file in the Extensions folder.
        Locate the "Conflict Catcher™ Reference" file in the Extensions folder.

Changes and New Features in 4.0.3:
• Compatibility with Mac OS 8:

– Mac OS 8 includes a new file called Appearance Extension which must be enabled for Mac OS 8 to successfully startup. Previous versions of Conflict Catcher were able to disable this extension and therefore keep machines running Mac OS 8 from starting up. Conflict Catcher v4.0.3 will not allow this file to be disabled.

– Other minor changes necessary to support Mac OS 8, including new sets.
• Added Find and Find Again commands to the File menu.
• Type selection (from within the main window, Conflict Catcher will find a file if you type the first character(s) of the file name), Tab, and Arrow Keys will auto-expand categories to display files.
• Duplicating sets will now select the new set.
• Added Scan Startup Files to the Special menu for easier access.

Changes and New Features in 4.0.2:
• The installer offers to re-enable your previous startup file manager upon removal of Conflict Catcher.
• The English version of Conflict Catcher 4 now supports international operating systems.
• Group links have been updated.
• Online Help has been updated.
• Updated built-in sets for System 7.6 and 7.6.1.
• Fixed a potential problem with "Edit File Types" preferences.
• Conflict Catcher now displays more characters in the version string within the magnifying glass window.
• Breaking Group Links to a Startup File

Occasionally, it may be necessary to break any group links to a specific startup file.   This allows direct manipulation of a file while ignoring any group links that might include it.   The "Break Links" button is located directly below the "Change Colors" button for any magnified startup file.   To break a link, simply click the button and indicate that you really want to break any group links to this startup file. Incompatible and Forced Order links are unaffected by this option.

Changes and New Features in 4.0.1:
• Updated the Reference Library.

• Fixed a potential problem with Conflict Testing plug-ins.
• Miscellaneous bug fixes.

• Non-Apple Keyboards
We have confirmed that the following 3rd-party keyboards have an issue with CC4's ability at startup to use pre-defined startup keys, as well as bringing up CC4 by holding down the spacebar: Datadesk 101E, Keytronics, and Radius.
