- 8 : Troubleshooting

Introduction to Download Deputy

Welcome to Download Deputy, by Ilesa Software. Download Deputy lets you create lists of remote files for a batch download at a later time. Why is a batch downloading so important? Because it lets you do what you want with your time while your files download, without babysitting your Macintosh. Each file begins transferring as soon as the previous one finishes. Instead of staying with your computer for 50 minutes while that five megabyte file comes across the phone lines at less than optimal 1.7 Kb/sec, you can do errands, spend time with your kids, etc., letting Download Deputy manage the downloads. You can set it to logoff, quit, or even shut down your Mac once the transfers are complete.
