Helix Express 4.5 -> 4.5.1 Patch

This patch will update Helix Express from version 4.5 to version 4.5.1.

1)
You can apply the patch to an installed Fat Binary, 680x0, or PPC Helix application.

2)
If the Helix application has been modified with ResEdit you must re-install the original application before applying the patches.

3)
The version number in the splash screen will not change after the patch is applied. The Get Info dialogue in the Finder will display the correct version.

4)
Each patch will replace the original application with the new one. The original application is put in the Trash, so you may need to "Empty Trash" between Updates.

5) If an error is reported while the patch is being applied, try re-installing the appropriate Helix Express 4.5 application and then apply the patch again.
