Setting Up the Port Juggler Software

The Port Trigger List*

The Port Trigger List is where you teach the Port Juggler software what device you have attached to it.   The Port Trigger List is located in the Chooser by selecting the Port Juggler icon.

ou will first be asked where the Port Juggler is connected.   You must select   either the Printer port or the Modem port**.   You will want to ckeck the box on the bottom of the screen if you are connecting two Port Jugglers.

*PowerBook Users: You must select the modem port for the Port juggler to operate correctly.   If you have mistakenly selected the printer port, You can reset the port Juggler software by trashing the "Port Juggler Prefs" file located in your Preferences folder.

** Note, if you do not select either the modem or printer port, the Port Juggler software will default to the printer port.
