

rik J. Barzeski

Yes! Apple Wizards has its own domain name after only 4 months of existence! I just think that's really cool! Can you tell? I'm using exclamation points like crazy! How did we get here, and where is here, exactly? Well, the answers are lots of hard work and <http://www.applewizards.net/>. We also have our readers to thank. Without readers, we couldn't get sponsors, and without sponsors we couldn't get our own domain name. If you haven't been to the domain name yet, stop by. You may recall just two months ago I was musing about how fast these things grow up. Now my baby has moved out of the house and into her own domain name.

I must take time here to thank Other World Computing for their one-year sponsorship of Apple Wizards. I have personally dealt with Other World Computing in my role as Technical Director for several departments at Ohio Northern University. They have an extremely knowledgeable and courteous staff and GREAT prices. If you're looking for something that deals with computers, anything at all, stop by <http://www.macsales.com/> and check out Other World Computing.

We also have a contest this month. Below is the "fifth icon." You will need it to win a copy of Speed Doubler or RAM Doubler from our website. Pop by our website (URL above) and check out the "contests" area for full details! The last date for entries is 25 September 1997, so hurry! Winners will be announced in next month's issue.

ave you been to our new domain name yet? If you have, you may know that this is the "fifth icon" that you need to complete the contest form. Hmm....what is it? Stop by the website if you know for your chance to win. Just check out the "contests" area! Good luck!

## rica J. Marceau

Erica J. Marceau was unable to work on this month's issue of Apple Wizards. The staff wishes her the best of luck as she transports herself and her belongings across numerous states in search of knowledge. In other words, she moved to college. Good luck!
