

each issue we will do a feature on the ships from a certain Sci-Fi show this issue is B5 the next is Star Trek, then well, we will change to a different feature, but any way, what we will do is have the name of the ship then....

its max sub light speed,

its weapon strength,

its hull strength,

its manovrbuiltity,

All are out of ten, 10 indicates the ultimate, 1 indicates poor or good if its a fighter.

If you add them all up and get 40 the you have miss counted of it could take on an

entire Shadow fleet on its own so for the younger races 8 is good for the middle races

15 is good and for the Mimbari 20 is good and the first ones well 30 is good, totals are

displayed below ratings.

Unfortunately we have no ships for the following:-

Markabs

Game

Lumati

And a few other alien races you man never of heard of.
