

## The AV Computer:

### CD-ROM

There is an invisible QuickTime movie, "Our Gang!", inside the Preferences Folder, inside the System Folder in the disk "Macintosh CD-Install Me First" that came with my 840AV, and also comes with the 660AV, and has system 7.1 in it. It contains a 5 minute home made video by one of the programmers over at Apple. There are also a couple of pictures of the development team tucked away in the ROM.

### Video Monitor

In the application Video Monitor, which comes with most AV computers, go to "About Video Monitor...". From there hold down Option and click on the picture of a video camera. Replacing "Apple Computer inc...." is "Written by Gary Woodcock-Animal Magnetism by Phaser".
