Control Panels:

Color

In the color control panel, click and hold down on "Sample Text" and you will see the name of the person who programmed it.   Click again and you will see the other creator.   If you click some more you will see yet another person named Don Louv.   It's hard, but by clicking even more rapidly you will find the words "doodle doodle dee" and "wubba wubba wubba".

Cache Switch

In the control panel (version 7.0.1) press Option and click on the version number.   Watch as its creator's name is revealed.

Turn Balloon Help on and point to the version number.   The balloon will read "Wink, wink".   (These two will only work for a Quadra)

CloseView

Use Balloon Help on the CloseView icon.   Kind of funny.

Date and Time

Balloon-help on "Daylight Savings Time" to see a common phrase.

Desktop Patterns

When having Desktop Patterns open and holding down Option the button at the bottom of the desktop colors will switch to "Set Utilities Pattern" in which you can change the window pattern of various utilities.

Extensions Manager (system 7.5)
Click on the version number.

Labels
In System 7 in the Labels Control Panel delete all of the names of the Labels.   Upon Restarting your computer you will find the letters "alanjef" in the Labels Menu-Bar.

Map
When holding down Shift while opening the map control panel the map will appear magnified, type mid and you get the middle of nowhere.

-Another trick is holding down Option when opening the Map.   (200%)

-Holding Shift And Option will magnify to the max.   (400%)

-Hold down Option and push find will scroll through all places on the map.

-Also when clicking on the version the dialogue "v.7.0, by Mark Davis" will show in the dialogue box.   (His initials are also printed in Antarctica)

-You can paste any image you want onto the map.   For those that have System 7.5 I recommend you copy the color map from the Jigsaw Puzzle.

-If you push Option-Find you can scroll through all the places on the map from A-Z.   If you pass Zurich then the names of the places will be in the native language they are spoken there.

Memory
Turn virtual memory on in memory and hold down option while selecting the hard drive to get some interesting credits.

Monitors
In monitors, if you click on the version in the upper right hand corner it will show some credits.   If you hold down option the smile face will change.   Different names will appear and they will begin to shuffle if you push the Option button repetedly past 12 times.   In early versions of the Monitors control panel when you click on the version number only a smiley face pops up.   As the versions progress you will see more and more credits and eventually they will be in color.

Screen
Hold down Option and click on the upper half of the words "Screen Brightness" to see a credit for Gayle Wiesner.   Don't ask me how I found this one.

PC Setup
Hold down Option and balloon help the version number.

Sounds
In the sounds control panels if you hold down Option and scroll down to sound input or any menu you will hear a sound and see some credits. (system 7.5 only)

Also in the sound control panel under Sound Effects (AV Macs) if you click and hold down on the little version and icon in the lower right-hand corner of the screen, a credit will scroll along the bottom of the screen.

Teleport Serial
In the Teleport Gold II Control Panel called Teleport Serial hold down Shift and click on "About…".   For those of you who don't have the modem it says "Couldn't find the modem".   The button you push to clear the message says "But I SEE One!".

Window Shade
In Window Shade if you click on the mouse button in the picture you will see some credits by the author.   This will not work with version 1.2 or earlier.
