Information on this version:

I checked almost all possible easter eggs myself to make sure they were current with system 7.5.2. If I find more in systems such as Copland (System 8) I will update this version.

The rest of the eggs I found myself. For the most part I spent hours of my own time searching for these easter eggs. If you have any more easter eggs, the answers to my questions, know any other internet sites where I can obtain more info., liked this list, or know what any of the codes entered in MacsBug mean, please reply at: IXist@aol.com.

If you send me an easter egg that I do not already have, I will print your name, e-mail address, and anything else you want underneath the egg you provided.

If anyone decides to use my easter eggs for their own list, I ask that you tell me where to find it, and please do not pass it off as your own work. If this makes it as far as being published on a disk, web page, CD-ROM, book, or magazine please inform me. I don't care if it is done; I just like to know where this list is going. Thanks.

Lastly, I have to add that I am not liable for anything that goes wrong while trying these eggs. The most severe result I experienced was having my screen freeze after using MacsBug. Try them at your own risk.
