Pillars

----

version 2.0.1

by

Erik Ekengren

erik_e@geocities.com

What is it?

Pillars is a Kaleidoscope 2 scheme for use with Kaleidoscope 2.0.   Pillars is totally free, but is not public domain.

Pillars is my first attempt to create a version 2 scheme. It is not using all 2.0 scheme stuff. It's really just a scheme that I did to familiarize myself with the new 2.0 version of color schemes and as such it's not as well done as it could have been.

How do I use it?

Place it anywhere, then double-click it.

Requirements?

Kaleidoscope 2.0b3 or later
MacOS™ compatible system (would be difficult without it)

Distribution

Pillars may be distributed freely on any media. If You include it on a CD, I'd really appreciate a copy, but if You don't want to send me one, then don't.

Thanks to

Greg Landweber for creating Kaleidoscope and making it easier for 3rd party scheme authors (it was VERY time-consuming and irritating before version 1.5)

Legal Stuff (got to have some)
