Subject: Sound problems.

Question: I've just installed Quick Time 3 and the sounds in games like Marathon and Doom are terribly distorted. What is the problem, is it QT 3.

Answer: Sorry but this is a problem with Quick time 3. There is no real answer but I would recommend installing the sound manager which comes with Quick Time 3.0. If that does not help you will just have to wait until they release an update for Quick Time 3!

Subject: .dd

Question: I recently came across some files with the dd extension, which I can't open. What are they and how do I open them?

Answer: A .dd file is a Disk Doubler file. You should be able to decompress them using the free DD expand. Which is available on most good cover CD's.
