

ALAP OS 8.5 Updater

When using ALAP XTensions under Mac OS 8.5, at times a problem will occur causing ALAP and QuarkXPress dialog boxes to display incorrectly. To remedy this problem, we have provided an ALAP OS 8.5 Updater application.

Using the ALAP OS 8.5 Updater:

- 1) Before you begin, make copies of your ALAP XTensions. You should only use the Updater on copies, leaving the originals on your hard disk until after the update has been successfully completed.
- 2) Select the ALAP XTensions you wish to update, then drag and drop them onto the ALAP OS 8.5 Updater icon. You may also update individual XTensions by double-clicking to launch the updater application, then using the “Open...” command from the File menu to select the XTension to be updated. *Note: The ALAP Mac OS 8.5 updater is for use with ALAP XTensions only.*
- 3) When the Updater is finished, a dialog box will be displayed listing all the XTensions processed and whether or not they were successfully updated. This report can be saved as a file by clicking the “Save” button.

Once all ALAP XTensions are updated successfully, you will be able to use them with Mac OS 8.5.

This is a temporary fix to make our products compatible with Mac OS 8.5. Future versions of our products will not require this patch. Please check our web site at www.alap.com for availability of new releases. If you have any questions or comments, please feel free to contact us via email at support@alap.com or 760-438-5790.
