About XT-now.com

XT-now

XT-now is a "one-stop shop" sales and information environment for QuarkXPress users and developers. More than just an online catalog, it is a convenient, comprehensive and authoritative Quark XTension electronic boutique that includes product reviews; up-to-the-minute news and information; tips and tricks from recognized industry experts; free, downloadable demonstration software; and fully functional XTensions and documentation, which can be purchased and downloaded online, or ordered via an automated fax-back system. XT-now is a production of Media-Network and Busy Box Productions — seasoned professionals who have earned their marks in the media industry.

Media-Network

Established in 1996, Media-Network's mission is to create the premier electronic content and commerce resource to enable the global exchange of products, services and information for the media industry. Its flagship product, media-network.com, will be the "first stop" for creative professionals, a comprehensive community of interest for immediate, direct access to producers and consumers of goods and services. Media-Network's exclusive "channels" (XT-now, Plugin-now, photo-now.com), and its carefully selected affiliated "channels" (lebook.com, koyosha.com, worldstyle.com) feature full-text, multi-lingual search and retrieval capabilities; a dynamic news and content server; data capture and integration tools; intelligent agents that locate people and information based on the user's preferences; WebObjects-based commerce services; and automated administration and accounting features.

Busy Box Productions

Busy Box Productions creates, designs and delivers commercial Internet and Intranet-based business solutions for some of the world's largest media companies. From its offices in NY and SF, the Company serves a worldwide clientele, producing dynamic content programming that creates commercial opportunities for its clients, including Agence France Presse; Apple Computer; Digital Stock; EMPICS; National Basketball Association; United News and Media, UK;

Frequently Answered Questions

about the XT-now.com website

1. What's the easiest way to find what I'm looking for?

2. How can I buy a product?

3. Are all software programs available for shipping and download?

4. When ordering downloaded products, will I receive manuals or disks?

5. What type of payments do you accept?

6. Is it secure to give my Credit Card over the Internet?

7. Do I get a receipt?

8. Can I return software?

9. How do you ship?

10. How do you handle International Orders?

11. Can I fax in my order?

12. Can I set up a Corporate Account?

13. Do you offer product support?

14. Can I sell my XTension through xt-now.com?

15. How can I reach you?

16. Could my computer catch a virus when downloading software at xt-now.com?

17. What kind of files am I downloading, and how do I open them?

1. What's the easiest way to find what I'm looking for?

Browsing
To browse products, click the Browse button in the left window. In the right window, you can browse by category, developer or product name. Select the appropriate method using the pull-down menu and click Browse. Click on an XTension's name and you will see a short description on the right. Click on the XTension's name above the description to get to the product's own page containing pricing info, graphics, additional content, and demo download options.

Searching
Click the Search button in the left window. The search includes product pages and reviews. In the Search window, search for XTensions by entering the appropriate keywords in the text field and pressing the 'Search' button. Click Power Searching Techniques to find out how to improve your search results. Or use the 'Search Phrases' we've provided to make finding solutions as easy as clicking a link.

2. How can I buy a product?

Start with the Product Page
Review Your Shopping Basket
Proceed to Checkout

Start with the Product Page
Once you have found (by searching or browsing) an XTension in which you are interested, click on the product's name to display the its own page, where you will find detailed information about the XTension. Here, select the configuration that has the platform, language version, user license, and method of delivery of your choice. Click on 'Demo' to download a demo version; click on the Price ($ amount) to start the purchasing process by adding this product to your Basket.

Review Your Shopping Basket
You can enter the Basket after clicking on the price of the XTensions that you'd like to purchase. A new and secure window will appear. You will know that the transaction will be handled securely because you will see an UNBROKEN key (in Netscape Navigator), and a CLOSED PADLOCK (in Microsoft Internet Explorer).
In the Basket, you can modify your order. To order a different amount of an XTension, highlight the quantity and enter the number you wish to order. To remove an item from your basket, simply click on the trash can icon next to that item. After making these changes, make sure to press the 'Update' button. To add an XTension to your basket, go to any Product Page and click on the price of the product that you'd like to add.

Proceed to Checkout
Once you are satisfied with your Basket's contents, click 'Checkout' to move to the Checkout screens. If you'd prefer to submit your order by fax, click Fax, and follow the instructions. (This option is only available when all products in the basket are to be delivered through shipping.) Checking out takes 3 or 4 steps: giving Customer Information, Payment Information, printing your Receipt, and Downloading your products (if applicable). At any time during Checkout, you may press 'Cancel' to exit Checkout. Remember, however, that this does not empty your Basket for the next 48 hours so you can go back to your cancelled order later. Follow the instructions on each of the four Checkout screens. At any point in time you can press the Back button to change information that originated in the previous screens.

Step 1 of 4: Customer Information
Enter billing and shipping information. If you have purchased items from xt-now.com or other Media-Network sites in the past, you can simply enter your EMAIL address and ZIP code to retrieve your previously saved information. If the customer information is correct, press 'Continue' to proceed. Otherwise, correct the information. If the order information is incorrect, click the Back button to change any incorrect information that originated in the previous screen (your Basket).

Step 2 of 4: Payment Information
Enter your credit card information and click 'Process Order for the Amount of US$ xxx' if all customer and order information is correct. Do not proceed if there is any incorrect information because all sales are final (If you'd like to try out the software first, go to the product page and download a demo version).

Click the Back button to change any incorrect information that originated in the previous screens.

Step 3 of 4: Receipt
This is the confirmation that your order has been received. For your records, please print or save this receipt. If you need to contact us about this order, please have the order number handy.
If you have purchased products that will be shipped, you are finished now. You will also receive a confirmation by email.

If you have purchased downloadable products, click on Download Software.

Step 4 of 4: Download
Here is where you can download your products by clicking the download buttons. Make sure you do this for every product you purchased for downloads. If you have purchased a product that requires you to enter a serial or registration number, the number will appear on this page. Since this number may be required to activate the software during installation, we advice you to save or print this page. If no serial number appears in the product description, click Download (this software has serial numbers embedded in the software).

Already downloaded a demo version?
If you already have downloaded a demo version, you don't need to click the Download button. Simply use the serial or registration number displayed on the Download page to activate the software.

3. Are all software programs available for shipping and download?

If you are within the U.S. - Continental, Alaska, Hawaii or Puerto Rico, you can purchase products either by downloading or by having the product shipped to you. Please note that some of our products are only available by downloading them. For our International orders, we only offer you downloadable products.

4. When ordering downloaded products, will I receive manuals or disks?

You only will receive the digital files that you download, which include the manual. In case the manual is an Acrobat file, you can download the Acrobat Viewer. You will not receive physical manuals or disks in the mail.

5. What type of payments do you accept?

We currently accept Visa, MasterCard, and American Express credit card orders.

6. Is it secure to give my Credit Card over the Internet?

All of our Secure Servers have 128 bit SSL encryption installed. We have taken all the necessary precautions to make your transactions secure.

7. Do I get a receipt?

Yes, immediately after placement of your order you can print a screen with all pertinent order information. In addition, a confirmation of your order will be emailed to you.

8. Can I return software?

To protect the interest of our vendors with sales of downloadable digital products, all sales are final, except in cases of malfunctioning software. However, xt-now.com provides downloadable demo versions of all the XTensions so you can try the products out before you buy. In cases of malfunctioning software, downloaded products will be exchanged for a working version with the same serial number. Physical products will need to be returned before a new set can be sent out. Contact returns@xt-now.com to receive return address and return instructions.

9. How do you ship?

We ship all of our US Continental, Alaska, Hawaii and Puerto Rico physical products via FedEx 2Day when the orders are placed by 10.30 AM (PST). With the exception of hardware protected products, all International products are available for Download Only.

Shipping Table

Country	One Product	Per Additional Product
U.S. - Continental	$ 8.00	$ 1.75
Alaska or Hawaii	$ 18.00	$ 2.25
Puerto Rico	$ 17.00	$ 2.25

If your shipping address is outside the U.S., we will fulfill your orders with downloadable products only, with the exception of selected products that are hardware copy protected. You don't have to pay import duties or value added taxes on your downloaded products. When ordering hardware copy protected products to your Basket, you will receive instructions for a special fax order procedure.

10. How do you handle International Orders?

For our International orders, we only sell downloadable products (except where noted otherwise). If you are an overseas customer, please email us if you would rather have purchased a physical product. For shipping pricing, see our Shipping Table.

11. Can I fax in my order?

Yes, if you prefer to fax in your order instead of submitting your order electronically, you can order your boxed products by clicking the Fax button in your Basket. Note that you cannot receive downloadable products when faxing in your order.

12. Corporate Accounts

If your order is more than $1,000 and your company has more than $5 Million in annual revenues, you could qualify for a corporate account. Please return the Credit Application Form or send us email at orders@xt-now.com

13. Product Support

If you encounter any problems during the transaction or download process, please contact us at support@xt-now.com . If you have specific questions about a particular XTension, please contact the XTension developer. You could also search through previous questions and answers in the xt-now.community forums, which is frequently visited by our XTension developers. You could also post your questions there. Experts across the world, who use XTensions on a daily basis, regularly access xt-now.community.

14. Can you sell my XTension through xt-now.com?

Yes. Please check out the Benefits for Developers, and contact us at info@xt-now.com.

15. How can I reach you?

info@xt-now.com	For general information for developer and customer inquiries
orders@xt-now.com	For information on open orders or corporate accounts.
returns@xt-now.com	For information on how to return malfunctioning software.
webmaster@xt-now.com	For comments, suggestions and problems on our site.

16. Could my computer catch a virus when downloading software at xt-now.com?

No, all software, read me files and manuals have been checked for viruses with SAM, updated 1 August 1997.

17. What kind of files am I downloading, and how do I open them?

If you are using a Mac OS system: All of our Macintosh XTensions are either Stuffit Archives (.sit files) or BinHex archives (.hqx files). Both can be decompressed using StuffIt Expander from Aladdin Systems, which you can get from their website at http://www.aladdinsys.com. Refer to the documentation included with StuffIt Expander for an explanation of its usage.

If you are using a Windows system: All of our Windows XTensions are either "self-extracting" archives (.exe files) or Zip files (.zip files). "Self-extracting" archives are just that; simply run the program to decompress the contents. For Zip file manipulation, we
recommend WinZip, which you can get from http://www.winzip.com/.

Alphabetical Listing

Ad Creation Toolkit

Ad Creation Toolkit is an XTension that provides a number of utilities for building ads in XPress. The XTension can store and recall frequently used ad sizes, save ad information (client name, ad number, etc.) within the XPress file, print ad information on the file and track total time an ad is worked on in XPress.

Add Hyphens

When it becomes necessary to define a large number of hyphenation exceptions within QuarkXPress, Add Hyphens is a must. Users creating documents that contain technical jargon, medical phrases, or unusual street names may find a demand for many hyphenation exceptions. With Add Hyphens, you can easily create or import extensive exceptions lists.

AdInfo

The AdInfo XTension helps keep track of the workflow of QuarkXPress documents. It records which users work on a document and how much time they spend making the revision, making it easy to monitor productivity levels in a workgroup.

AdTracker

AdTracker helps keep users abreast of revisions to a document in QuarkXPress by keeping a log of the date and time of individual revisions of a document, as well as providing the number of times the document was saved. AdTracker keeps track of the total time the document was in use - an invaluable feature when billing a client by the hour for design work.

AgencyPack

A 3-in-1 XTension born of Madison Avenue ad agencies, the AgencyPack XTension adds three very handy features to Quark 3.0 and higher. It includes a versatile group scaler, guide placement and printing tool (you can change guides by double-clicking them too), and a unique greeking and ungreeking feature for disguising live copy. The scaler works by size or percent, proportional or non-proportional and best of all—it can quickly scale an entire document!

Alias Pro

Alias Pro is a QuarkXPress XTension which provides the ability of creating, saving and then executing consecutive Find/Change tables to text within QuarkXPress documents, including all printable Macintosh characters, all QuarkXPress special characters and control characters used by PCs.

ArtSlugger

GLUON ArtSlugger allows you to place crucial file name and path information as well as complete registration and cropmarks next to any graphic. This is particularly useful in situations where large numbers of electronic graphic files are being used and need to be proofed and/or cataloged.

AutoPrice

Provides sophisticated, two-way linking of QuarkXPress documents to any external database. Supports both text and picture information. Also includes comprehensive reporting and batch processing features.

Batch Collect

Collect for Output in batch mode. Gathers up all of the elements required to produce an entire group of QuarkXPress documents. Works just like Quark's built-in collection feature but allows you to work with more than a single document at a time. Includes a comprehensive reporting feature which lists all pictures, fonts and colors used throughout the entire group of documents.

Batch Print

Prints hundreds of Quark documents automatically. Handles every aspect of the printing operation including one-time page/print setup, automatic updating of modified pictures, separation of spot colors, EPS font and color management, and more. Also maintains a detailed report file of all printing activity.

Batch Update

Updates all modified and missing pictures throughout an entire group of documents. Supports three options for missing pictures: Prompt, Skip or Search. Up to 10 different search volumes can be specified along with sub-folder options. Also generates a complete report file detailing picture usage throughout all documents.

BatchPrinter

An XTension that facilitates printing the entire contents of QuarkXPress folders. This is a big helper for any one who needs to print out more than one job and wants to free themselves of the tedium waiting to click on the Print button. Simply direct XPress to the folder you want printed, and BatchPrinter will sequentially print the jobs in that folder.

BeyondPress

BeyondPress allows QuarkXPress users to publish their documents on the World Wide Web. Version 3.0 adds support for the latest HTML features, such as Cascading Style Sheets and TrueDoc fonts, plus Java Applets, QuickTime Movies, Animated GIFs and more...

Bobzilla

The Bobzilla XTension features Go to Page, Line Check, Super Step and Repeat and Full-Resolution TIFF Output capabilities.

Bookletizer

QuarkXPress automatically creates facing pages in reader's spreads format. But when it comes time to output a saddle-stitched publication, the document needs to be rearranged into printer's spreads format. With Bookletizer, converting a document from reader's spreads to printer's spreads is as easy as a menu command.

BoxStyles

When you need to keep box elements looking unified in your documents, BoxStyles is the answer. BoxStyles provides style sheets for boxes in QuarkXPress that work like the text-based style sheets you are already familiar with.

BoxWaves

GLUON BoxWaves automatically creates, in seconds, text and picture box effects that otherwise may take hours to create. To get a sophisticated margin effect, in the past, one would typically have to exit Quark, open Illustrator and create runaround objects to achieve an effect BoxWaves gives in seconds.

Bundler

The Bundler XTension is designed to enable the user to create a self-extracting compressed packet containing a copy of the document plus all of the items or information needed to safely open and print the document on a different computer at a different time and/or place.

Bureau Manager

The Bureau Manager XTension is the definitive tool that allows you to completely prepare a job for delivery to a service bureau. It quickly extracts information from the original document to determine which files are required, and it copies them to a specified volume to enable your documents to be printed accurately at the bureau.

Calibration

The Printer Calibration XTension lets you compensate for the spreading and bleeding of halftone dots on any printer you use with QuarkXPress 3.3.

ChangeCase

Allows QuarkXPress 3.1 or higher users to change the case of characters in text boxes to either uppercase or lowercase by choosing the appropriate menu item from the Utilities menu.

CLASS

If you've ever wanted to apply a style sheet to part of a paragraph in QuarkXPress, CLASS is the XTension you have been waiting for. CLASS stands for Character Level Applied Style Sheets, and CLASS styles may be applied to any selected range of text for precise text formatting.

Clone

Clone is a QuarkXTension that facilitates automated multi-up layouts such as labels or business cards. Basically anything that fits on a sheet of paper that you would manually copy and paste or step and repeat can be made into a template that the user can fill in and with a command, layout all the duplicates at once.

Color Manager

This XTension allows you to identify, control and easily manipulate any color or shade used within your document. Colours applied to all items can be searched for and replaced, screen angles can be specified, and colour reports can be prepared. A simple mechanism to toggle Process Separation settings for colours is also provided. Spot and process colours in EPSF files can also be accessed and reported on.

ColorBreaker

ColorBreaker places "tags" which contain pertinent color information for that item on each colored item and text block. To avoid putting tags on top of each other we have added a "collision avoidance" feature which decides whether to move the tag and use a call out arrow.

ColorPrefs

ColorPrefs is a free and simple XTension that allows you to change the color of XPress items.

Contents XTn

Contents and Index Key Words: Exports marked contents text or key words for subject index. Up to nine levels of entries can be exported.

Cool Blends
Cool Blends XTension adds the ability to create a variety of blends in QuarkXPress.

Copy Grabber
Cut, copy and paste an entire column of tabular copy in two easy steps. Drag a marquee around a page area and cut or copy it to the special Copy Grabber clipboard. Paste the entire column into a different location. Great for catalog work, annual reports, or anything else involving tabular composition. Full Undo/Redo support.

CopyFlow
Copyflow achieves dramatic improvements in productivity. By applying names to XPress text and picture boxes and associating them with text and image files, Copyflow can batch import multi-page documents for rapid page assembly and batch export them for efficient data repurposing.

CopyReader
GLUON CopyReader uses Macintosh Text-to-Speech software to read your XPress docuemnts aloud to you, facilitating the proofreading process.

CopySet
CopySet is an XTension that helps find and alter overset and underset text boxes. With the click of a button a text box can be shortened or lengthened to accommodate the text it contains. CopySet also includes a feature that counts the lines, words and characters in a selected story.

Corel WordPerfect Filter
It imports files from WordPerfect 3.0 and 3.1 for Mac OS and WordPerfect 6.x for Windows. The filter can also export files from QuarkXPress 3.3x to WordPerfect 6.x for Windows.

CPSI Fixer
CPSI Fixer XTension corrects a printing problem affecting CPSI PostScript Level 2 devices. NOTE: Only use this XTension with CPSI devices experiencing EPS clipping problems.

Crops XT
Crops XT is an XTension that creates crop and registration marks around selected items on the XPress page. Crops XT allows users to set up preferences for the size and offset of the crop and registration marks. Various combinations of marks can also be chosen, and available marks include a color bar, CMYK bar, gray-scale bar, targets and a CMYK tag.

Cropster
Cropster is what you use when you want to make professional, precise ads or other documents within the page boundaries of a larger page. Many ad agencies create all ads on tabloid size paper in order to have additional room for comments, slugs, etc.

CyberPress

CyberPress is the quickest, easiest and most cost-efficient way to move existing content out of QuarkXPress and onto the World Wide Web. CyberPress offers a complete solution for repurposing magazines, newsletters and other QuarkXPress documents in HTML for the Web. Easily convert images, text, tables and lists, then use PageMill to edit formatting, add frames, URL's, and backgrounds.

Dashes

The Dashes XTension provides high quality Hyphenation for your QuarkXPress text. It's aim and purpose is to provide a tool that improves the appearance and readability of a user's page by inserting hyphens which are inconspicuous, so as not to disturb the flow of meaning in the story.

Data Assistant XT

Data Assistant XT adds data/mail-merge capabilities to QuarkXPress. Powerful features confined to a single easy-to-use palette. Everything you need to access any comma delimited data file. Navigation controls for scanning the data file record by record.

DiHyphXT

DiHyphXT provides high-quality supplemental hyphenation based on the well-known Dieckmann hyphenation algorithms used in high-end proprietary typesetting, text and publishing systems worldwide.

Doc Magnify XT

The XTension is fairly basic, it allows the user to bring up a floating palette (I know, not another one!) that has a pop-up menu with different magnification values on it. These range from 10% to 1200%.

Double Save

The Double Save XTension is invaluable to users working with a central file server system for QuarkXPress documents. Double Save ensures that documents processed and saved on the local work station are also saved on the centralfile server. Users may define a different folder for documents in which the copy has to be saved. Double Save processes take place in the background,preventing typical network traffic delays.

DropIT XT

DropIt XT is a simple yet powerful XTension which allows you to "drag and drop" text and image files from your Macintosh desktop directly into existing text and picture boxes in your QuarkXPress documents.

Droplet

Speed up production. Anything "Cmd-E" can do, Droplet can do better. Simply drag files from their folders and drop them directly into place on an XPress page or pasteboard.

Easel

An XTension for QuarkXPress that lets the user set the pasteboard height above and below the page.

EDGAR Filter

The EDGAR Filter is a text export filter that exports text from an XPress document to a text file compatible with the Securities and Exchange's EDGAR Filing system.

EPSmaker

GLUON EPSmaker simplifies converting multiple page documents to EPS files. If you save a lot of pages as EPS files then this is for you. Instead of one page at a time you can set a range of pages. Another fine job for batch process automation!

FCSLock

This XTension will allow an administrator to disable any feature of XPress so that other users are not able to modify certain aspects of XPress documents. FCSLock can disable any menu item of XPress, selected tools from the Tool palette, and the other palettes.

FCSPrint

The main purpose of FCSPrint is to allow users to print XPress documents without errors and with maximum productivity. This XTension will automatically set all the options of the Setup and Print dialog boxes to save as much film as possible and to avoid ever-costly human errors.

FCSTableMaker

A collection of functions designed to facilitate the production of tabular data and page layout grids in QuarkXPress. Though succinct in function, FCSTableMaker provides a large portion of the functionality needed by most users without the overhead, learning curve, RAM and disc size that other programs require.

File Manager

File Manager is the ideal low-cost workgroup publishing utility that is an invaluable tool for administering your QuarkXPress documents, either on stand-alone or networked computers. You can use the file hunter utility to search for documents with criteria based on name and\or user-defined header data.

FlexScale

FlexScale allows a QuarkXPress document to be scaled when it is output to a printer. The vertical and horizontal scaling percentages are independent from one another. The document can be scaled between 50 and 150 percent.

Font Fetch

QuarkXPress users no longer have to write down cryptic names of fonts that are missing in documents and then go into Suitcase to find and open them. Font Fetch effortlessly opens any missing fonts in documents and libraries as well as those embedded in EPS images, saving hours a week, that are accessible from sets in Symantec Corp.'s Suitcase 3.0.

FontLoad

FontLoad is the intelligent way to manage fonts directly out of QuarkXPress. Fontload automatically locates, identifies, and registers fonts stored locally on network volumes or on removable media. FontLoad will automatically open the fonts required by that document, wherever they may be stored.

FRÆMZ PS XT

An XTension for QuarkXPress that allows you to create custom high-resolution Postscript borders for use as backdrops, ornaments or other parts of your publications. These borders scale to any size with no bitmap "jaggies" as with Quark's Frame Editor.

FSI Tools

FSI Tools will help you manipulate text and containers on the page. Whether you specialize in text or graphics, if you need to make adjustments quickly — you need FSI Tools. This QuarkXPress XTension will simplify the way you work. Anyone who uses QuarkXPress will benefit from the Autofit Container, Spread to Fit, Align and Feather commands.

Greeker

The Greeker XTension allows you to scramble the selected text in your QuarkXPress document. This is useful for sending a client a dummy copy, yet giving them a clear picture of how the final piece will look.

Grid Master

Grid Master creates equally-spaced grids of text or picture boxes two ways. The XTension can create boxes or grids of boxes in a defined area when given the number of boxes and gutter width across and down. Grid Master lets users fill an area with equally-sized and spaced boxes, or they can create a grid of boxes of a size they choose.

Headers XTn

RunningHeaders: Generate running headers and footer of upto nine levels. Text can be marked using the mouse, tags or styles.

HexWeb XT

HTML pages plus the complete Web server structure at the tip of your fingers from within QuarkXPress. Site Management is the key for successful, professional Web Publishing. HexWeb XT, the leading HTML XTension for publications, offers a complete set of site-oriented features, such as link checking, automatic tables of contents, frames and now, Layers.

HTML XPort

Allows text to be exported from Quark into the HTML format.

HX AnchorMaster

If you have grouped items that should reflow with its associated text, HX AnchorMaster will take care of your problem. You simply copy or cut a group and paste it into text, then the group is anchored and moves when editing text causes text reflow.

HX BoxTool

Provides the BoxTool palette to work on boxes with a mouse click.- moves selected boxes- duplicates selected boxes- resizes selected boxes- locates boxes sequentially by usage history or by their position- enables to view the active box on opening a document- changes the stacking order of boxes- aligns selected boxes- controls the amount of space between selected boxes

HX ColorMaster

Makes the production of color publications more efficient. - provides information about all colors defined in a document - save or print the color usage information - search for and replace colors within a user-defined scope - remove unused colors - easily check or set the process separation status for all colors

HX ExpressFont

Enables you to define a set of fonts you work with for a specific task and replace the original installed-font list with only those you have selected.- immediate font-selection responses at pop-ups and menus- shows short font list that enables quick font selection- optionally assigns keyboard equivalents

HX Glossary

Provides functions to enter special symbols or lengthy blocks of text quickly and easily.- saves typing by replacing abbreviations with entire text blocks- Symbol palette enables you to enter special symbols- Picture Font palette enables you to enter picture symbols

HX Index/TOC

Automatically creates an index or a table of contents within QuarkXPress.- select text and mark it as an entry to build an index or TOC- generates TOC or index when all entries are marked- creates an index or TOC from separate documents, too

HX PowerResize

The HX PowerResize XTension program enables you to select multiple text boxes, picture boxes and lines including those contained in a group, and resize not only outlines of boxes but also their contents and format controls with a single operation.

HX PowerSearch

Enables you to find and replace attributes of text, paragraph, style sheet, text box, picture box, line or frame.- finds and display an item to meet the find specifications- the search range can be entire document, user specified pages, selected boxes or selected text- you can search only specific type of boxes in the search range- replaces attributes of the found item with replacement specifications.

HX PowerSelect

Enables you to select non-contiguous blocks of text so that you can change the format of whole selections with a single operation using a menu or keyboard command.- uses marquee-style selection tools- applies formatting to only those selected characters- also supports a rectangular text selection

HX PowerUnderline

The HX PowerUnderline XTension program enables you to draw a line or a box easily and quickly for the selected text with various line attributes at the position you specify. It also allows the creation of line style sheets.

HX Shortcut

Enables you to apply a predefined set of attributes to a selected item or text from the keyboard.- shortcuts defined with a set of attributes- supports character, paragraph, text box, picture box, line and frame- sets can be applied to the selected item by pressing a key- sets can be applied by clicking a shortcut name in the palette

I Shadow

The I Shadow XTension lets you create real soft shadow effects on text, graphics or graphic boxes without ever leaving QuarkXPress. There's no need to fire up your image-editing program to create shadows with this XTension. The soft shadows are made of TIFFs. You choose the resolution of your shadow, from 32 to 400 dpi.

IndeXTension

IndeXTension is an XTension that creates an index of words and phrases from a QuarkXPress document or documents. IndeXTension allows two different kinds of index markers to be added to QuarkXPress documents: an inclusive entry, which indicates a word or phrase found in the text should appear in the index; and a general entry, which allows users to create an index entry that uses words not found in the document's text.

INposition

INposition 1.6.3 is the fastest, easiest to use and most cost-effective page imposition software in the prepress market. By using native formats in QuarkXpress, INposition eliminates the need to output intermediate PostScript files before imposing.

INposition Lite

INposition Lite 2.0 is the perfect "starter" imposition program for users who only have jobs that need support for up to 4-up plates and 32-page signatures. Designed for ease of use and fast learning curve, INposition Lite has all the major features in high-end imposition products.

Jabberwocky

Jabberwocky allows you fill a text box with random text for testing and placement purposes.

Job Time

With the Job Time XTension, the amount of time spent on a QuarkXPress document can be automatically tracked and documented eliminating the needto create inaccurate time estimates. With Job Time, various activities suchas layout, correction, or input activities can be documented separately.Job Time saves the tracking information with the document and can be exported as an ASCII-file. The exported file can be processed by a database or spreadsheet program.

JobSlug

JobSlug helps users keep track of document revisions and versions by placing a custom slug on their QuarkXPress document page. To add a JobSlug to a document, users create a new text box and execute a menu command. They then choose what information appears in the JobSlug.

Keyboard Shortcuts for LP 2.6

Now for power users of Live Picture 2.6 comes a new product from Left Dakota: Keyboard Shortcuts for Live Picture 2.6! Simply run this installer on your English version of Live Picture 2.6 (not 2.5) and over 95% of the program will have keyboard shortcuts.

Layer It!

Layer It! is an XTension that helps manage multiple layers of a complex XPress document. Layer It! lets users hide the parts of a document that cause the bottleneck so they can work more efficiently. It can select items layer by layer, moving up and down, to help users understand how the layers overlap in any given document.

LinkIndex

LinkIndex is the most versatile and most comprehensive indexing XTension available for QuarkXPress. Indexes, Table of Contents, lists of illustrations, tables or any other aspect of your publication can be quickly and easily created using LinkIndex's simple user interface.

LinkUP!
When you are publishing information of any kind, ensuring that it is always up to date with your primary data source is often a monumental task. LinkUP! provides an elegant solution that allows the data to be automatically updated inthe QuarkXPress publication, and even allows changes made in the publication to be updated into the originating database. There is no need to double key information ever again.

MasterMenus
MasterMenus provides an easy way for you to have commonly used menu items as close as a click on a custom palette which contains exactly what you choose! The MasterMenus Preferences dialog provides an easy inter-face that is used to build the custom palette.

MatchPrints
The MatchPrints XTension automatically labels all of the placed graphics in a QuarkXPress document. This makes it easy to identify which graphic files are used in any area of a document. The labels are placed in QuarkXPress text boxes on, above or below the graphics in the document, and the user may specify the font and size of the text which identifies the graphics.

Math Grabber
Lets you perform spreadsheet-like calculations on numerical text appearing anywhere in a QuarkXPress docu-ment. Users can specify precision of calculation, and can also create "separator sets" which allow you to work with mixed currency formats in the same document. Full Undo/Redo support.

MAX
MAX (Multi Attribute Xchanger) is a Quark XTension that allows users to do a more complex find and replace operation on text styles than is possible through the standard XPress find/change feature. MAX gives users the flexibility to find text according to a combination of many text attributes, then change any or all of those attrib-utes.

Missing Link
The Missing Link adds features to the Unlinking and Linking tools. The Linking tool can now be used to link text chains to other text chains that already contain text. The Unlinking tool can be used to duplicate a box that is part of a linked text chain. The duplicate box contains the text present in the original box.

MS Word Filter
Allows both import and export of Microsoft Word files.

Multi Style II
The MultiStyle II XTension increases the text-formatting power of QuarkXPress. This XTension is a must for every person dealing with tables, calendars, ads, and other complex layout activities. Using a text template, multiple text styles in words and paragraphs are easily copied and applied to unformatted words and para-graphs.

Navigator XT
Navigator XT is a palette that allows users to move through a QuarkXPress document effortlessly. The palette displays a thumbnail of the current page or spread. Clicking on a point in the thumbnail scrolls the document to the point where it was clicked.

Notes

The Notes XTension displays a notes palette so you can enter and display non-printing notes in a QuarkXPress document.

Nouveau II

Nouveau II gives the standard QuarkXPress New document dialog a facelift, adding several features. Nouveau's features include the ability to save multiple new document settings, creating a document whichstarts a new section, and automatically setting a number of pages to be created at the creation of the document.

Output Utilities Toolkit

Output Utilities Toolkit is an XTension that contains a number of output related utilities for graphics professionals. Eight powerful utilities are yours in one handy package.

Overset Alert

Overset Alert is an XTension that helps you catch overset text before you output a document.

PageBorder XT

PageBorder XT is an XTension which prints a border around the page or spread when you output a document.

PageCopy

PageCopy automates the process of copying pages from one document to another and even allows easy duplication of entire pages within a document.

PageShot

PageShot allows users to specify multiple pages to be saved as EPS files. Users can specify multiple pages either by page or by simply checking the "All Pages" check box. PageShot allows users to designate a certain area of the page to be saved as an EPS. It also allows users to save a text or graphic box as an EPS file.

PageXTractor

PageXTractor prepares QuarkXPress files for direct storage in "open" digital management/archiving/browsing systems such as Extensis Portfolio, Canto Cumulus, and many others that support Apple's and Adobe's PNOT standard.

Pasteboard XT

Pasteboard XT allows you to change the width and height of the pasteboard. This is similar to changing the pasteboard width percentage using the QuarkXPress application Preferences.

Pasteboard XTerminator

Allows you to remove the requirement of having Pasteboard XT installed from documents whose pasteboard size has been altered with Pasteboard XT.

PDF Design XTension

The Portable Document Format (PDF) of Adobe's Acrobat has quickly become astandard for document storage, transport, CD-ROM books, and web-pagepublishing. Acrobat allows the user to save documents created in any number of applications, on either the Mac or PC platform, in a format that anyone using the Acrobat Reader (freeware) can display, read, and perform keywordsearches on. The tools for creating PDF documents with linking, bookmarks,and so on are now also found in the PDF Design XTension.

Perfect XT

The Perfect XTension enables you to import documents created with WordPerfect for the Macintosh into a QuarkXPress document in a very efficient way. It enables you to import the text including the character specifications.

Photoshop Import XTension

With the Photoshop Import XTension, native Photoshop images can be importedinto and printed directly from QuarkXPress — even if the Photoshop file contains several layers! The Photoshop Import filter directly imports these Photoshop images, eliminating the need to save in an additional format, and saving valuable time and disc space.

Pianzhang

Much more than just an extension for QuarkXPress, Pianzhang is also a powerful application that turns Quark into a long document pagination powerhouse. Pianzhang allows the user to set the "make up" parameters, and with computer speed and computer accuracy, consistently produce professional quality long documents.

PICTmaker

GLUON PICTmaker automatically saves pages as PICTs for multimedia use. Converting Quark pages to PICT files has never been easier. With PICTmaker you can quickly save out an entire document for easy export into multimedia and other desktop programs.

Picture Manager

The Picture Manager XTension is a must for any XPress user who works with multiple graphics in their documents. Picture Manager has a unique graphic hunt and import capability which rounds up and batches various graphic files from specified folders and volumes anywhere on the network.

PowerBalance

A considerable amount of time can be spent making a story fit a box or set of linked text boxes. PowerBalance is used to automate this process at the touch of a button. It automatically fits text to a text box or set of linked text boxes (single and multi-column) by adjusting user defined parameters.

PowerMatter

PowerMatter allows the user to identify and manipulate QuarkXPress text box overmatter. Text areas can be shrunk or expanded to accommodate text that underfills or overfills its text box. Text is fully editable in the PowerMatter overmatter box.

PowerRules

PowerRules automates and simplifies difficult, frustrating and time consuming tasks in the production of documents such as books, magazines, and newspapers. PowerRules provides fast and efficient ruling capabilities for complex pages.

PressMarks

The PressMarks XTension lets you create templates of PostScript registration marks and document information that are added to each page of your QuarkXPress documents as they print. With an easy-to-use, powerful interface, PressMarks offers over thirty different items you can place around the page by dragging them with the mouse or by using the X and Y coordinates.

Preview Editor

Preview Editor gives you the flexibility to use an image-browsing program such as Extensis Fetch as a tool to manage your QuarkXPress documents. Preview Editor makes this possible by attaching a PICT preview to your documents. It works in the background, attaching and updating the preview to reflect the appearance of each document each time it is saved.

PriceIt

PriceIt brings in-place price updating to QuarkXPress users, both cutting the time it takes to create publications and guaranteeing accuracy of published prices. Catalogues and price lists can now be updated automatically whenever your core pricing figures change. Working with data taken from any ASCII data source, PriceIt allows prices to be updated from databases, spreadsheets and even wordprocessed text files.

Print Grabber

Select and print (or export as EPS) any partial page area. Selected area can be specified by marquee selection or by clicking on a box to define the area. Once selected, page area can be printed or exported as an EPS graphic.

Print One XT

A very simple XTension that does one basic thing: it allows you to print one copy of your document without having to go through your print dialog box. You can select the menu option under utilities or hit Control-Option-Command-p.

PrinterPicker

PrinterPicker lets you change output devices on the fly from within the QuarkXPress environment. PrinterPicker's functions are accessed through an unobtrusive floating palette. A pair of popup menus let you make your selections with ease to make switching output devices a snap.

Proofer

GLUON Proofer makes any document instantly readable. This XTension is for all those times copy proofreaders are compelled say "I can't read this" because, in the grayscale printout of a color document, the colors don't have enough contrast. This is especially true for small KO type.

PS Utilities

PS Utilities add several printing and Postscript enhancements, including a Error Handler, EPS Bleed, Overprint EPS Black, and others.

PubViews
Without the need to run QuarkXPress, PubViews displays entire folders of complete XPress documents in thumbnail form, which can be used to plan or track production.

QuarkPrint
The latest version of the QuarkPrint utility included with QuarkXPress.

QuickMenus XT
QuickMenus XT puts hard-to-access features of QuarkXPress right into the title bars of every document window! Now you can get at the features you need most without floating toolbar palettes getting in the way. With QuickMenus XT you can quickly find and use commands right in the window where you are working.

QX-Tools
QX-Tools 2.0 is an award-winning collection of XTensions for QuarkXPress. Designed to be productive without a steep learning curve, QX-Tools offers 15 useful tools that address a variety of common tasks.

RefreshIt
Adds a keystroke to force XPress to redraw after screen redraw has been interrupted.

ReproTime
GLUON ReproTime converts color documents to repro files. It makes converting jobs for repro as easy as possible. ReproTime will rapidly scan a document, change the text and rules to black and put holding rules where needed.

Resize XT
Resize XT offers two ways to resize groups of page elements in QuarkXPress. Users may activate the Resize XT preference dialog to indicate how the group should be resized. Resize XT also adds the Resize Tool to the QuarkXPress tool palette. The Resize Tool may be used to drag the corner of a group to indicate its new size. Supports proportional and non-proportional scaling.

RGB Alert XT
A comprehensive flexible prepress production tool that will preemptively check QuarkXPress documents for RGB TIFF and EPS graphics and will warn the user if a problem exists. It additionally has the capability to warn of spot colors applied to elements of the document.

RTF-to-XPress
RTF-to-XPress is a universal import module which opens any RTF file, independent of the platform (Mac, UNIX, Windows, DOS, OS/2, CPM mainframe systems) and independent of the program which generated it, directly in QuarkXPress.

SaveMe
SaveMe is an XTension which reminds you it is time to save your document when you are working within QuarkXPress 3.2 or higher. Saving your document more frequently may help you lose less work if your Mac unexpectedly crashes or if there is a power failure.

Script Manager XT

This XTension gives users an interface for working with scripts they have written for QuarkXPress. Script Manager XT provides a palette that displays a list of scripts that are launched at a click of the mouse. The XTension adds the powerful convenience of being able to gang together scripts so they run in sequence.

ScriptMaster XT

Have you ever wanted to use QuarkXPress's powerful scripting features but didn't want to spend the time it would take to learn how? Now you can start scripting QuarkXPress instantly by installing ScriptMaster XT, the XTension that makes QuarkXPress recordable!

Selector

Print the plates in any order you like. In QuarkXPress you have two options when you print separations: you can print one specific plate or all plates. With Selector you are not limited...

ShapeShifter

ShapeShifter allows you to create complex masking effects instantly using Quark picture boxes. Simply select a picture box and choose ShapeShifter from the Gluon or Utilities menu. All types of picture boxes can be ShapeShifted: rectangular, elliptical and polygon. After using ShapeShifter your picture box is a fully editable polygon box.

Signatures LT

GLUON SignaturesLT automatically paginates for printer's spreads. While there are other XTensions out there that make printer's spreads automatically, most have trouble competing with our ease of use and most certainly our price. SignaturesLT quickly rearranges page layouts in any of the standard signature formats.

SpellBound

The SpellBound spell checker provides functionality and features not found in the internal QuarkXPress spellchecker. Spellbound is available in many languages, it allows access to multiple auxiliary dictionaries and provides an exception dictionary (useful for house styles). Spellbound has a phonetically-based lookup facility.

SpellBound Technical Dictionaries

Auxiliary dictionaries for the SpellBound XTension including thousands of terms needed by today's health care, legal, and scientific engineering professionals. You're only a split second away from turning your QuarkXPress into a technical word expert!

SpotLite

Separate colours in QuarkXPress automatically. Since QuarkXPress 3.3 was released with the new feature to import the colours in the EPS-images to QuarkXPress colour list, there have been a lot of plates printed which never should have been printed at all. To prevent spot-colours on separate plates, use SpotLite.

Stars & Stripes

Allows you to create custom underlines, and starbust shaped boxes.

StyleWorks

With StyleWorks you can conveniently define all stylesheet attributes through a single expandable palette. A separate palette let's you control how interdependable style sheets are relinked for the document or portions-thereof.

Stylist Pro

The Stylist Pro QuarkXTension is a small floating palette that provides several essential text editing tools: a "Font Table" that displays for insertion the entire character set of a given font - including QuarkXPress special characters, a "Change Case" tool to modify the case of the selected text, a "Text Info" tool to get text statistics such as signs, words, paragraphs, lines, etc, and direct access to document style-sheets, in Style Sheet mode, Paragraph format mode, Text attributes mode.

Super Tabs

The Super Tabs XTension gives you direct access to all tabs defined in our document. Tab settings are displayed in an editable list, where you can seethe distances in relative or absolute mode. The relative mode is especial-lyuseful for making tables. The distances shown in the palette are the spacesbetween the tabs stops and are easy to edit. From the palette you can alsoedit the tab settings within style sheets.

Tab Grabber

Interactively adjust tab positions by dragging a marquee around the page area you wish to modify. Allows you to select and modify all tab settings without the need to edit Quark style sheets or change tab settings one at a time. Nudge a column into perfect position, change alignment or fill character. Full Undo/Redo support.

TableMaker

Use Gluon TableMaker to convert TAB delimited text into an accurate table instantly. TableMaker can be used to "force fit" your table into the text box size.

Text Grabber

Select and modify text attributes anywhere on a page using the Meadows unique "marquee" method of text selection. Drag a marquee around any page area and change all text falling within the marquee. Great for changing complete columns in tabular composition. Includes Apply button and full Undo/Redo support.

Text Toolkit

The Text Toolkit is a collection of over a dozen utilities for working with text in your QuarkXPress documents. This handy toolkit can do everything from performing case conversion to telling you which stories in your document are overset.

TeXTractor

TeXTractor is the comprehensive text extraction XTension for QuarkXPress. With TeXTractor, you can export all of the text in a document or selected portions of the text using any filter currently available to QuarkXPress.

TextWaves

GLUON TextWaves is a design oriented XTension that facilitates the creation of incredible typographical effects within the QuarkXpress document itself. Designers can try dozens of wild variations on headlines and body copy in the same amount of time it would normally take to see what one variation would look like.

Thesaurus reX

Thesaurus reX is an electronic thesaurus of the English language for QuarkXPress. The XTension lets you look up synonyms in a 220,000 word thesaurus without ever leaving QuarkXPress. The thesaurus is as easy to activate and use as the QuarkXPress Check Spelling feature.

Thing-a-ma-Bob

Thing-a-ma-Bob includes updated features from the FeaturesPlusT XTension: Make Fraction/Price, Value Converter Palette, Remove Manual Kerning and Word/Space Tracking features.

TIFF Export

The TIFF Export XTension lets you save your pages or spreads as Tagged Image File Format files (TIFFs) for greater portability. You can select a DPI of 10-400 for the resulting TIFF files so the resolution of the image is as great as you'd like. TIFF Export even lets you choose the page scale that best suits your needs for great TIFFs every time.

TimeStamp

This XTension lets you apply unlimited time stamps to your documents to help you determine when the document was last revised. The stamps are automatically updated when the document is saved. The XTension includes several date formats and the option to include information in your stamp such as the computer's network name, the document name and fonts used in the document.

Touch

The Touch XTension creates libraries that can include graphics, QuarkXPress documents and text files. When adding items to a Touch library, items from Fetch catalogs can be copied into the library or they can be imported from a folder on the hard drive. Once items are in a Touch library, the entries may be sorted by the order they are imported, by their file name, file type, volume or folder.

Twister XT

Now custom typographic effects are available directly within your documents - no need to launch other programs and link their artwork back into XPress, just make a Twister box and go!

UC3 XTn

Data Conversion in XPress: Convert data from word processor packages using XTND or DataViz filters and definitions directly from within XPress.

UngroupAll

UngroupAll is an XTension which allows you to ungroup layers of grouped items.

Unlinker

How many times have you gone to duplicate or copy a box only to get a warning that this box has linkages which can't be duplicated? Unlinker solves this problem instantly by unlinking the box, leaving all the text exactly the same.

UPC-EAN XTension

The UPC-EAN Xtension generates bar code symbols as EPS files - simply type in your symbol's digits. You can create UPC version A, UPC version E, Bookland (ISBN), ISSN, EAN-8/JAN-8, and EAN-13/JAN-13 symbols.

Verbaytum

Verbaytum provides a way to link text stories to a QuarkXPress document, similarly to the way pictures are linked to QuarkXPress documents. When an imported text file changes, you are notified that the original story has changed, and you may then choose to update the text. You may also elect to have stories automatically reimported whenever Verbaytum finds that the original text file has been altered.

Vision Contents

Vision Contents is a flexible table of contents creator for QuarkXPress documents. Instead of creating the entire table of contents by hand, Vision Contents allows you to set preferences for the table. Then the table of contents is created automatically following the user-defined preferences. A table of contents can be created for a single document, or Vision Contents can batch process files to quickly generate a table of contents to describe any number of documents.

Windows Design ColleXTion

The Windows Design ColleXTion is a set of seven XTensions for QuarkXPress. These XTensions may be installed all at once or in combinations to add various design features to QuarkXPress for Windows. These design-oriented XTensions help make everyday design tasks in QuarkXPress easier.

Windows Text ColleXTion

The Windows Text ColleXTion contains six XTensions. They let you access all of the characters of any font from a single palette; conveniently choose H&J settings, control text block linking, and apply style sheets to text while preventing selected attributes of the text from being overwritten by new style sheets; lets you copy and apply text characters and paragraphs.

XCambio

XCambio is an XTension for QuarkXPress to assure that it is the high resolution image that are saved when you Save as EPS in QuarkXPress. A common problem when Saving as EPS is that you have a preview image mounted when you perform the saving and that will result in a low resolution image in the EPS file. If you use XCambio when you Save as EPS you will get an option to switch the mounted low resolution image to the high resolution image saving.

Xdream

This collection of more than two dozen multipurpose utilities for QuarkXPress makes all kinds of everyday publishing tasks easier. It includes conversion of documents to printer's spreads format, case conversion, counting selected words, text alphabetizing and a style sheet reporting utility. It can magnify the view of documents onscreen up to 1,200 percent and even automatically deletes colors not actually being used in the document.

XFlow

XFlow is an XTension that helps automate template-based design by automatically importing text and graphic files into the XPress document. When using boilerplate templates to create documents and importing graphics and text files, all the user needs to do is to identify the boxes in the template once, then the XFlow XTension automatically does the importing.

XNotes

XNotes allows the user to write messages which become part of the QuarkXPress file. The notes can be written, read, edited, deleted, or printed by anyone who has a copy of XNotes. XNotes gives the user a way to communicate with the person who might later open QuarkXPress documents, including directions to service bureaus or messages to other users.

XReference

XReference lets users set markers into the text and when they are visible, the marked text may be highlighted or colorized to help identify it. Reference markers are set into the text of documents at points in which the reader will be referred back to. Once all markers are placed in the text, they are hidden and, with a single command, the XReference XTension places the page numbers where the reference is located at the spot indicated by the relation markers.

XToons

XToons is a family of small QuarkXPress XTensions, each one providing one single feature. Started with 6 members, the XToons family is now counting 25 members and is scheduled to expand by 6 new items every quarter.

XToons Pairs

4 pairs of XTensions, normally available only as a part of the XToons Collection, designed to enhance your productivity.

XTSee

XTSee is a collection of utilities for working with graphics within QuarkXPress. With this XTension, users can catalog graphics or label the graphics in a publication. There's even a floating palette that displays information all about the currently selected graphics. Eleven handy graphic-related tools in one easy-to-use package help to save time when working with imported graphics.

Design XTensions

BoxWaves

GLUON BoxWaves automatically creates, in seconds, text and picture box effects that otherwise may take hours to create. To get a sophisticated margin effect, in the past, one would typically have to exit Quark, open Illustrator and create runaround objects to achieve an effect BoxWaves gives in seconds.

FCSTableMaker

A collection of functions designed to facilitate the production of tabular data and page layout grids in QuarkXPress. Though succinct in function, FCSTableMaker provides a large portion of the functionality needed by most users without the overhead, learning curve, RAM and disc size that other programs require.

FRÆMZ PS XT

FRÆMZ PS XT is a collection of decorative borders which install directly into QuarkXPress under the Utilities menu. Once installed, you can modify the size and shape of the border to your requirements. FRÆMZ PS XT contains 404 proportional borders you can scale to any size and print out, distortion free.

HX AnchorMaster

If you have grouped items that should reflow with its associated text, HX AnchorMaster will take care of your problem. You simply copy or cut a group and paste it into text, then the group is anchored and moves when editing text causes text reflow.

HX ColorMaster

Makes the production of color publications more efficient. - provides information about all colors defined in a document - save or print the color usage information - search for and replace colors within a user-defined scope - remove unused colors - easily check or set the process separation status for all colors

HX PowerUnderline

The HX PowerUnderline XTension program enables you to draw a line or a box easily and quickly for the selected text with various line attributes at the position you specify. It also allows the creation of line style sheets.

ItemMaster

ItemMaster offers flexibility and control for designers and production artists who want a consistent feel throughout a document. With ItemMaster, the style sheet metaphor that QuarkXPress uses for text has been extended to all page elements.

LinkIndex

LinkIndex is the most versatile and most comprehensive indexing XTension available for QuarkXPress. Indexes, Table of Contents, lists of illustrations, tables or any other aspect of your publication can be quickly and easily created using LinkIndex's simple user interface.

PowerRules

PowerRules automates and simplifies difficult, frustrating and time consuming tasks in the production of documents such as books, magazines, and newspapers. PowerRules provides fast and efficient ruling capabilities for complex pages.

Proofer

GLUON Proofer makes any document instantly readable. This XTension is for all those times copy proofreaders are compelled say "I can't read this" because, in the grayscale printout of a color document, the colors don't have enough contrast. This is especially true for small KO type.

ShapeShifter

ShapeShifter allows you to create complex masking effects instantly using Quark picture boxes. Simply select a picture box and choose ShapeShifter from the Gluon or Utilities menu. All types of picture boxes can be ShapeShifted: rectangular, elliptical and polygon. After using ShapeShifter your picture box is a fully editable polygon box.

StyleWorks

With StyleWorks you can conveniently define all stylesheet attributes through a single expandable palette. A separate palette let's you control how interdependable style sheets are relinked for the document or portions-thereof.

TextWaves

GLUON TextWaves is a design oriented XTension that facilitates the creation of incredible typographical effects within the QuarkXpress document itself. Designers can try dozens of wild variations on headlines and body copy in the same amount of time it would normally take to see what one variation would look like.

Twister XT

Now custom typographic effects are available directly within your documents - no need to launch other programs and link their artwork back into XPress, just make a Twister box and go!

Windows Design ColleXTion

The Windows Design ColleXTion is a set of seven XTensions for QuarkXPress. These XTensions may be installed all at once or in combinations to add various design features to QuarkXPress for Windows. These design-oriented XTensions help make everyday design tasks in QuarkXPress easier.

Editorial XTensions

Ad Creation Toolkit

Ad Creation Toolkit is an XTension that provides a number of utilities for building ads in XPress. The XTension can store and recall frequently used ad sizes, save ad information (client name, ad number, etc.) within the XPress file, print ad information on the file and track total time an ad is worked on in XPress.

AdInfo

The AdInfo XTension helps keep track of the workflow of QuarkXPress documents. It records which users work on a document and how much time they spend making the revision, making it easy to monitor productivity levels in a workgroup.

AdTracker

AdTracker helps keep users abreast of revisions to a document in QuarkXPress by keeping a log of the date and time of individual revisions of a document, as well as providing the number of times the document was saved. AdTracker keeps track of the total time the document was in use - an invaluable feature when billing a client by the hour for design work.

Alias Pro

Alias Pro is a QuarkXPress XTension which provides the ability of creating, saving and then executing consecutive Find/Change tables to text within QuarkXPress documents, including all printable Macintosh characters, all QuarkXPress special characters and control characters used by PCs.

ColorBreaker

ColorBreaker places "tags" which contain pertinent color information for that item on each colored item and text block. To avoid putting tags on top of each other we have added a "collision avoidance" feature which decides whether to move the tag and use a call out arrow.

CopyReader

GLUON CopyReader uses Macintosh Text-to-Speech software to read your XPress docuemnts aloud to you, facilitating the proofreading process.

CopySet

CopySet is an XTension that helps find and alter overset and underset text boxes. With the click of a button a text box can be shortened or lengthened to accommodate the text it contains. CopySet also includes a feature that counts the lines, words and characters in a selected story.

File Manager

File Manager is the ideal low-cost workgroup publishing utility that is an invaluable tool for administering your QuarkXPress documents, either on stand-alone or networked computers. You can use the file hunter utility to search for documents with criteria based on name and\or user-defined header data.

IndeXTension

IndeXTension is an XTension that creates an index of words and phrases from a QuarkXPress document or documents. IndeXTension allows two different kinds of index markers to be added to QuarkXPress documents: an inclusive entry, which indicates a word or phrase found in the text should appear in the index; and a general entry, which allows users to create an index entry that uses words not found in the document's text.

JobSlug

JobSlug helps users keep track of document revisions and versions by placing a custom slug on their QuarkXPress document page. To add a JobSlug to a document, users create a new text box and execute a menu command. They then choose what information appears in the JobSlug.

MatchPrints

The MatchPrints XTension automatically labels all of the placed graphics in a QuarkXPress document. This makes it easy to identify which graphic files are used in any area of a document. The labels are placed in QuarkXPress text boxes on, above or below the graphics in the document, and the user may specify the font and size of the text which identifies the graphics.

MAX

MAX (Multi Attribute Xchanger) is a Quark XTension that allows users to do a more complex find and replace operation on text styles than is possible through the standard XPress find/change feature. MAX gives users the flexibility to find text according to a combination of many text attributes, then change any or all of those attributes.

PageCopy

PageCopy automates the process of copying pages from one document to another and even allows easy duplication of entire pages within a document.

PageXTractor

PageXTractor prepares QuarkXPress files for direct storage in "open" digital management/archiving/browsing systems such as Extensis Portfolio, Canto Cumulus, and many others that support Apple's and Adobe's PNOT standard.

Preview Editor

Preview Editor gives you the flexibility to use an image-browsing program such as Extensis Fetch as a tool to manage your QuarkXPress documents. Preview Editor makes this possible by attaching a PICT preview to your documents. It works in the background, attaching and updating the preview to reflect the appearance of each document each time it is saved.

PubViews

Without the need to run QuarkXPress, PubViews displays entire folders of complete XPress documents in thumbnail form, which can be used to plan or track production.

Thesaurus reX

Thesaurus reX is an electronic thesaurus of the English language for QuarkXPress. The XTension lets you look up synonyms in a 220,000 word thesaurus without ever leaving QuarkXPress. The thesaurus is as easy to activate and use as the QuarkXPress Check Spelling feature.

TimeStamp

This XTension lets you apply unlimited time stamps to your documents to help you determine when the document was last revised. The stamps are automatically updated when the document is saved. The XTension includes several date formats and the option to include information in your stamp such as the computer's network name, the document name and fonts used in the document.

Touch

The Touch XTension creates libraries that can include graphics, QuarkXPress documents and text files. When adding items to a Touch library, items from Fetch catalogs can be copied into the library or they can be imported from a folder on the hard drive. Once items are in a Touch library, the entries may be sorted by the order they are imported, by their file name, file type, volume or folder.

Verbaytum

Verbaytum provides a way to link text stories to a QuarkXPress document, similarly to the way pictures are linked to QuarkXPress documents. When an imported text file changes, you are notified that the original story has changed, and you may then choose to update the text. You may also elect to have stories automatically reimported whenever Verbaytum finds that the original text file has been altered.

Vision Contents

Vision Contents is a flexible table of contents creator for QuarkXPress documents. Instead of creating the entire table of contents by hand, Vision Contents allows you to set preferences for the table. Then the table of contents is created automatically following the user-defined preferences. A table of contents can be created for a single document, or Vision Contents can batch process files to quickly generate a table of contents to describe any number of documents.

XFlow

XFlow is an XTension that helps automate template-based design by automatically importing text and graphic files into the XPress document. When using boilerplate templates to create documents and importing graphics and text files, all the user needs to do is to identify the boxes in the template once, then the XFlow XTension automatically does the importing.

XReference

XReference lets users set markers into the text and when they are visible, the marked text may be highlighted or colorized to help identify it. Reference markers are set into the text of documents at points in which the reader will be referred back to. Once all markers are placed in the text, they are hidden and, with a single command, the XReference XTension places the page numbers where the reference is located at the spot indicated by the relation markers.

Graphics XTensions

Cool Blends
Cool Blends XTension adds the ability to create a variety of blends in QuarkXPress.

Color Manager
This XTension allows you to identify, control and easily manipulate any color or shade used within your document. Colours applied to all items can be searched for and replaced, screen angles can be specified, and colour reports can be prepared. A simple mechanism to toggle Process Separation settings for colours is also provided. Spot and process colours in EPSF files can also be accessed and reported on.

I Shadow
The I Shadow XTension lets you create real soft shadow effects on text, graphics or graphic boxes without ever leaving QuarkXPress. There's no need to fire up your image-editing program to create shadows with this XTension. The soft shadows are made of TIFFs. You choose the resolution of your shadow, from 32 to 400 dpi.

RGB Alert XT
A comprehensive flexible prepress production tool that will preemptively check QuarkXPress documents for RGB TIFF and EPS graphics and will warn the user if a problem exists. It additionally has the capability to warn of spot colors applied to elements of the document.

ShadowCaster
There's finally an easy, one-step way to create soft shadows for text, graphics, and groups within QuarkXPress. Graphics, text, and groups can be silhouetted, outlined, or ghosted with shadow resolutions from 32 to 400 dpi using Shadowcaster. And, from an easy-to-use palette, ShadowCaster offers a comprehensive Burn option for burning shadows into CMYK or RGB TIFF files.

Stars & Stripes
Allows you to create custom underlines, and starbust shaped boxes.

XTSee
XTSee is a collection of utilities for working with graphics within QuarkXPress. With this XTension, users can catalog graphics or label the graphics in a publication. There's even a floating palette that displays information all about the currently selected graphics. Eleven handy graphic-related tools in one easy-to-use package help to save time when working with imported graphics.

Input/Output XTensions

AutoPrice
Provides sophisticated, two-way linking of QuarkXPress documents to any external database. Supports both text and picture information. Also includes comprehensive reporting and batch processing features.

Batch Collect
Collect for Output in batch mode. Gathers up all of the elements required to produce an entire group of QuarkXPress documents. Works just like Quark's built-in collection feature but allows you to work with more than a single document at a time. Includes a comprehensive reporting feature which lists all pictures, fonts and colors used throughout the entire group of documents.

Batch Update
Updates all modified and missing pictures throughout an entire group of documents. Supports three options for missing pictures: Prompt, Skip or Search. Up to 10 different search volumes can be specified along with sub-folder options. Also generates a complete report file detailing picture usage throughout all documents.

BeyondPress
BeyondPress allows QuarkXPress users to publish their documents on the World Wide Web. Version 3.0 adds support for the latest HTML features, such as Cascading Style Sheets and TrueDoc fonts, plus Java Applets, QuickTime Movies, Animated GIFs and more…

CopyFlow
Copyflow achieves dramatic improvements in productivity. By applying names to XPress text and picture boxes and associating them with text and image files, Copyflow can batch import multi-page documents for rapid page assembly and batch export them for efficient data repurposing.

Corel WordPerfect Filter
It imports files from WordPerfect 3.0 and 3.1 for Mac OS and WordPerfect 6.x for Windows. The filter can also export files from QuarkXPress 3.3x to WordPerfect 6.x for Windows.

CyberPress
CyberPress is the quickest, easiest and most cost-efficient way to move existing content out of QuarkXPress and onto the World Wide Web. CyberPress offers a complete solution for repurposing magazines, newsletters and other QuarkXPress documents in HTML for the Web. Easily convert images, text, tables and lists, then use PageMill to edit formatting, add frames, URL's, and backgrounds.

Data Assistant XT
Data Assistant XT adds data/mail-merge capabilities to QuarkXPress. Powerful features confined to a single easy-to-use palette. Everything you need to access any comma delimited data file. Navigation controls for scanning the data file record by record.

Double Save
The Double Save XTension is invaluable to users working with a central file server system for QuarkXPress documents. Double Save ensures that documents processed and saved on the local work station are also saved on the centralfile server. Users may define a different folder for documents in which the copy has to be saved. Double Save processes take place in the background,preventing typical network traffic delays.

DropIT XT
DropIt XT is a simple yet powerful XTension which allows you to "drag and drop" text and image files from your Macintosh desktop directly into existing text and picture boxes in your QuarkXPress documents.

Droplet
Speed up production. Anything "Cmd-E" can do, Droplet can do better. Simply drag files from their folders and drop them directly into place on an XPress page or pasteboard.

EDGAR Filter
The EDGAR Filter is a text export filter that exports text from an XPress document to a text file compatible with the Securities and Exchange's EDGAR Filing system.

EPSmaker
GLUON EPSmaker simplifies converting multiple page documents to EPS files. If you save a lot of pages as EPS files then this is for you. Instead of one page at a time you can set a range of pages. Another fine job for batch process automation!

HexWeb XT
HTML pages plus the complete Web server structure at the tip of your fingers from within QuarkXPress. Site Management is the key for successful, professional Web Publishing. HexWeb XT, the leading HTML XTension for publications, offers a complete set of site-oriented features, such as link checking, automatic tables of contents, frames and now, Layers.

HTML XPort
Allows text to be exported from Quark into the HTML format.

LinkUP!
When you are publishing information of any kind, ensuring that it is always up to date with your primary data source is often a monumental task. LinkUP! provides an elegant solution that allows the data to be automatically updated inthe QuarkXPress publication, and even allows changes made in the publication to be updated into the originating database. There is no need to double key information ever again.

MS Word Filter
Allows both import and export of Microsoft Word files.

Output Utilities Toolkit
Output Utilities Toolkit is an XTension that contains a number of output related utilities for graphics professionals. Eight powerful utilities are yours in one handy package.

PageShot

PageShot allows users to specify multiple pages to be saved as EPS files. Users can specify multiple pages either by page or by simply checking the "All Pages" check box. PageShot allows users to designate a certain area of the page to be saved as an EPS. It also allows users to save a text or graphic box as an EPS file.

PDF Design XTension

The Portable Document Format (PDF) of Adobe's Acrobat has quickly become astandard for document storage, transport, CD-ROM books, and web-pagepublishing. Acrobat allows the user to save documents created in any number of applications, on either the Mac or PC platform, in a format that anyone using the Acrobat Reader (freeware) can display, read, and perform keywordsearches on. The tools for creating PDF documents with linking, bookmarks,and so on are now also found in the PDF Design XTension.

Perfect XT

The Perfect XTension enables you to import documents created with WordPerfect for the Macintosh into a QuarkXPress document in a very efficient way. It enables you to import the text including the character specifications.

Photoshop Import XTension

With the Photoshop Import XTension, native Photoshop images can be importedinto and printed directly from QuarkXPress — even if the Photoshop file contains several layers! The Photoshop Import filter directly imports these Photoshop images, eliminating the need to save in an additional format, and saving valuable time and disc space.

Pianzhang

Much more than just an extension for QuarkXPress, Pianzhang is also a powerful application that turns Quark into a long document pagination powerhouse. Pianzhang allows the user to set the "make up" parameters, and with computer speed and computer accuracy, consistently produce professional quality long documents.

PICTmaker

GLUON PICTmaker automatically saves pages as PICTs for multimedia use. Converting Quark pages to PICT files has never been easier. With PICTmaker you can quickly save out an entire document for easy export into multimedia and other desktop programs.

PriceIt

PriceIt brings in-place price updating to QuarkXPress users, both cutting the time it takes to create publications and guaranteeing accuracy of published prices. Catalogues and price lists can now be updated automatically whenever your core pricing figures change. Working with data taken from any ASCII data source, PriceIt allows prices to be updated from databases, spreadsheets and even wordprocessed text files.

PS Utilities

PS Utilities add several printing and Postscript enhancements, including a Error Handler, EPS Bleed, Overprint EPS Black, and others.

ReproTime

GLUON ReproTime converts color documents to repro files. It makes converting jobs for repro as easy as possible. ReproTime will rapidly scan a document, change the text and rules to black and put holding rules where needed.

RTF-to-XPress

RTF-to-XPress is a universal import module which opens any RTF file, independent of the platform (Mac, UNIX, Windows, DOS, OS/2, CPM mainframe systems) and independent of the program which generated it, directly in QuarkXPress.

TeXTractor

TeXTractor is the comprehensive text extraction XTension for QuarkXPress. With TeXTractor, you can export all of the text in a document or selected portions of the text using any filter currently available to QuarkXPress.

TIFF Export

The TIFF Export XTension lets you save your pages or spreads as Tagged Image File Format files (TIFFs) for greater portability. You can select a DPI of 10-400 for the resulting TIFF files so the resolution of the image is as great as you'd like. TIFF Export even lets you choose the page scale that best suits your needs for great TIFFs every time.

UC3 XTn

Data Conversion in XPress: Convert data from word processor packages using XTND or DataViz filters and definitions directly from within XPress.

XCambio

XCambio is an XTension for QuarkXPress to assure that it is the high resolution image that are saved when you Save as EPS in QuarkXPress. A common problem when Saving as EPS is that you have a preview image mounted when you perform the saving and that will result in a low resolution image in the EPS file. If you use XCambio when you Save as EPS you will get an option to switch the mounted low resolution image to the high resolution image saving.

Printing XTensions

ArtSlugger

GLUON ArtSlugger allows you to place crucial file name and path information as well as complete registration and cropmarks next to any graphic. This is particularly useful in situations where large numbers of electronic graphic files are being used and need to be proofed and/or cataloged.

Batch Print

Prints hundreds of Quark documents automatically. Handles every aspect of the printing operation including one-time page/print setup, automatic updating of modified pictures, separation of spot colors, EPS font and color management, and more. Also maintains a detailed report file of all printing activity.

BatchPrinter

An XTension that facilitates printing the entire contents of QuarkXPress folders. This is a big helper for any one who needs to print out more than one job and wants to free themselves of the tedium waiting to click on the Print button. Simply direct XPress to the folder you want printed, and BatchPrinter will sequentially print the jobs in that folder.

Bookletizer

QuarkXPress automatically creates facing pages in reader's spreads format. But when it comes time to output a saddle-stitched publication, the document needs to be rearranged into printer's spreads format. With Bookletizer, converting a document from reader's spreads to printer's spreads is as easy as a menu command.

Calibration

The Printer Calibration XTension lets you compensate for the spreading and bleeding of halftone dots on any printer you use with QuarkXPress 3.3.

CPSI Fixer

CPSI Fixer XTension corrects a printing problem affecting CPSI PostScript Level 2 devices. NOTE: Only use this XTension with CPSI devices experiencing EPS clipping problems.

Crops XT

Crops XT is an XTension that creates crop and registration marks around selected items on the XPress page. Crops XT allows users to set up preferences for the size and offset of the crop and registration marks. Various combinations of marks can also be chosen, and available marks include a color bar, CMYK bar, gray-scale bar, targets and a CMYK tag.

Cropster

Cropster is what you use when you want to make professional, precise ads or other documents within the page boundaries of a larger page. Many ad agencies create all ads on tabloid size paper in order to have additional room for comments, slugs, etc.

FCSPrint

The main purpose of FCSPrint is to allow users to print XPress documents without errors and with maximum productivity. This XTension will automatically set all the options of the Setup and Print dialog boxes to save as much film as possible and to avoid ever-costly human errors.

FlexScale

FlexScale allows a QuarkXPress document to be scaled when it is output to a printer. The vertical and horizontal scaling percentages are independent from one another. The document can be scaled between 50 and 150 percent.

INposition

INposition 1.6.3 is the fastest, easiest to use and most cost-effective page imposition software in the prepress market. By using native formats in QuarkXpress, INposition eliminates the need to output intermediate PostScript files before imposing.

INposition Lite

INposition Lite 2.0 is the perfect "starter" imposition program for users who only have jobs that need support for up to 4-up plates and 32-page signatures. Designed for ease of use and fast learning curve, INposition Lite has all the major features in high-end imposition products.

PageBorder XT

PageBorder XT is an XTension which prints a border around the page or spread when you output a document.

PressMarks

The PressMarks XTension lets you create templates of PostScript registration marks and document information that are added to each page of your QuarkXPress documents as they print. With an easy-to-use, powerful interface, PressMarks offers over thirty different items you can place around the page by dragging them with the mouse or by using the X and Y coordinates.

Print Grabber

Select and print (or export as EPS) any partial page area. Selected area can be specified by marquee selection or by clicking on a box to define the area. Once selected, page area can be printed or exported as an EPS graphic.

Print One XT

A very simple XTension that does one basic thing: it allows you to print one copy of your document without having to go through your print dialog box. You can select the menu option under utilities or hit Control-Option-Command-p.

QuarkPrint

The latest version of the QuarkPrint utility included with QuarkXPress.

Selector

Print the plates in any order you like. In QuarkXPress you have two options when you print separations: you can print one specific plate or all plates. With Selector you are not limited…

Signatures LT

GLUON SignaturesLT automatically paginates for printer's spreads. While there are other XTensions out there that make printer's spreads automatically, most have trouble competing with our ease of use and most certainly our price. SignaturesLT quickly rearranges page layouts in any of the standard signature formats.

SpotLite

Separate colours in QuarkXPress automatically. Since QuarkXPress 3.3 was released with the new feature to import the colours in the EPS-images to QuarkXPress colour list, there have been a lot of plates printed which never should have been printed at all. To prevent spot-colours on separate plates, use SpotLite.

Scripting Xtensions

Script Manager XT

This XTension gives users an interface for working with scripts they have written for QuarkXPress. Script Manager XT provides a palette that displays a list of scripts that are launched at a click of the mouse. The XTension adds the powerful convenience of being able to gang together scripts so they run in sequence.

ScriptMaster XT

Have you ever wanted to use QuarkXPress's powerful scripting features but didn't want to spend the time it would take to learn how? Now you can start scripting QuarkXPress instantly by installing ScriptMaster XT, the XTension that makes QuarkXPress recordable!

Type XTensions

Add Hyphens
When it becomes necessary to define a large number of hyphenation exceptions within QuarkXPress, Add Hyphens is a must. Users creating documents that contain technical jargon, medical phrases, or unusual street names may find a demand for many hyphenation exceptions. With Add Hyphens, you can easily create or import extensive exceptions lists.

ChangeCase
Allows QuarkXPress 3.1 or higher users to change the case of characters in text boxes to either uppercase or lowercase by choosing the appropriate menu item from the Utilities menu.

CLASS
If you've ever wanted to apply a style sheet to part of a paragraph in QuarkXPress, CLASS is the XTension you have been waiting for. CLASS stands for Character Level Applied Style Sheets, and CLASS styles may be applied to any selected range of text for precise text formatting.

Dashes
The Dashes XTension provides high quality Hyphenation for your QuarkXPress text. It's aim and purpose is to provide a tool that improves the appearance and readability of a user's page by inserting hyphens which are inconspicuous, so as not to disturb the flow of meaning in the story.

DiHyphXT
DiHyphXT provides high-quality supplemental hyphenation based on the well-known Dieckmann hyphenation algorithms used in high-end proprietary typesetting, text and publishing systems worldwide.

FontLoad
FontLoad is the intelligent way to manage fonts directly out of QuarkXPress. Fontload automatically locates, identifies, and registers fonts stored locally on network volumes or on removable media. FontLoad will automatically open the fonts required by that document, wherever they may be stored.

Greeker
The Greeker XTension allows you to scramble the selected text in your QuarkXPress document. This is useful for sending a client a dummy copy, yet giving them a clear picture of how the final piece will look.

HX PowerSelect
Enables you to select non-contiguous blocks of text so that you can change the format of whole selections with a single operation using a menu or keyboard command.- uses marquee-style selection tools- applies formatting to only those selected characters- also supports a rectangular text selection

Jabberwocky
Jabberwocky allows you fill a text box with random text for testing and placement purposes.

Multi Style II

The MultiStyle II XTension increases the text-formatting power of QuarkXPress. This XTension is a must for every person dealing with tables, calendars, ads, and other complex layout activities. Using a text template, multiple text styles in words and paragraphs are easily copied and applied to unformatted words and paragraphs.

Overset Alert

Overset Alert is an XTension that helps you catch overset text before you output a document.

PowerBalance

A considerable amount of time can be spent making a story fit a box or set of linked text boxes. PowerBalance is used to automate this process at the touch of a button. It automatically fits text to a text box or set of linked text boxes (single and multi-column) by adjusting user defined parameters.

PowerMatter

PowerMatter allows the user to identify and manipulate QuarkXPress text box overmatter. Text areas can be shrunk or expanded to accommodate text that underfills or overfills its text box. Text is fully editable in the PowerMatter overmatter box.

Stylist Pro

The Stylist Pro QuarkXTension is a small floating palette that provides several essential text editing tools: a "Font Table" that displays for insertion the entire character set of a given font - including QuarkXPress special characters, a "Change Case" tool to modify the case of the selected text, a "Text Info" tool to get text statistics such as signs, words, paragraphs, lines, etc, and direct access to document style-sheets, in Style Sheet mode, Paragraph format mode, Text attributes mode.

Text Toolkit

The Text Toolkit is a collection of over a dozen utilities for working with text in your QuarkXPress documents. This handy toolkit can do everything from performing case conversion to telling you which stories in your document are overset.

Windows Text ColleXTion

The Windows Text ColleXTion contains six XTensions. They let you access all of the characters of any font from a single palette; conveniently choose H&J settings, control text block linking, and apply style sheets to text while preventing selected attributes of the text from being overwritten by new style sheets; lets you copy and apply text characters and paragraphs.

Utility XTensions

AgencyPack

A 3-in-1 XTension born of Madison Avenue ad agencies, the AgencyPack XTension adds three very handy features to Quark 3.0 and higher. It includes a versatile group scaler, guide placement and printing tool (you can change guides by double-clicking them too), and a unique greeking and ungreeking feature for disguising live copy. The scaler works by size or percent, proportional or non-proportional and best of all—it can quickly scale an entire document!

Bobzilla

The Bobzilla XTension features Go to Page, Line Check, Super Step and Repeat and Full-Resolution TIFF Output capabilities.

BoxStyles

When you need to keep box elements looking unified in your documents, BoxStyles is the answer. BoxStyles provides style sheets for boxes in QuarkXPress that work like the text-based style sheets you are already familiar with.

Bundler

The Bundler XTension is designed to enable the user to create a self-extracting compressed packet containing a copy of the document plus all of the items or information needed to safely open and print the document on a different computer at a different time and/or place.

Bureau Manager

The Bureau Manager XTension is the definitive tool that allows you to completely prepare a job for delivery to a service bureau. It quickly extracts information from the original document to determine which files are required, and it copies them to a specified volume to enable your documents to be printed accurately at the bureau.

Clone

Clone is a QuarkXTension that facilitates automated multi-up layouts such as labels or business cards. Basically anything that fits on a sheet of paper that you would manually copy and paste or step and repeat can be made into a template that the user can fill in and with a command, layout all the duplicates at once.

Contents XTn

Contents and Index Key Words: Exports marked contents text or key words for subject index. Up to nine levels of entries can be exported.

Copy Grabber

Cut, copy and paste an entire column of tabular copy in two easy steps. Drag a marquee around a page area and cut or copy it to the special Copy Grabber clipboard. Paste the entire column into a different location. Great for catalog work, annual reports, or anything else involving tabular composition. Full Undo/Redo support.

Doc Magnify XT

The XTension is fairly basic, it allows the user to bring up a floating palette (I know, not another one!) that has a pop-up menu with different magnification values on it. These range from 10% to 1200%.

Easel

An XTension for QuarkXPress that lets the user set the pasteboard height above and below the page.

FCSLock

This XTension will allow an administrator to disable any feature of XPress so that other users are not able to modify certain aspects of XPress documents. FCSLock can disable any menu item of XPress, selected tools from the Tool palette, and the other palettes.

Font Fetch

QuarkXPress users no longer have to write down cryptic names of fonts that are missing in documents and then go into Suitcase to find and open them. Font Fetch effortlessly opens any missing fonts in documents and libraries as well as those embedded in EPS images, saving hours a week, that are accessible from sets in Symantec Corp.'s Suitcase 3.0.

FSI Tools

FSI Tools will help you manipulate text and containers on the page. Whether you specialize in text or graphics, if you need to make adjustments quickly — you need FSI Tools. This QuarkXPress XTension will simplify the way you work. Anyone who uses QuarkXPress will benefit from the Autofit Container, Spread to Fit, Align and Feather commands.

Grid Master

Grid Master creates equally-spaced grids of text or picture boxes two ways. The XTension can create boxes or grids of boxes in a defined area when given the number of boxes and gutter width across and down. Grid Master lets users fill an area with equally-sized and spaced boxes, or they can create a grid of boxes of a size they choose.

Headers XTn

RunningHeaders: Generate running headers and footer of upto nine levels. Text can be marked using the mouse, tags or styles.

HX BoxTool

Provides the BoxTool palette to work on boxes with a mouse click.- moves selected boxes- duplicates selected boxes- resizes selected boxes- locates boxes sequentially by usage history or by their position- enables to view the active box on opening a document- changes the stacking order of boxes- aligns selected boxes- controls the amount of space between selected boxes

HX ExpressFont

Enables you to define a set of fonts you work with for a specific task and replace the original installed-font list with only those you have selected.- immediate font-selection responses at pop-ups and menus- shows short font list that enables quick font selection- optionally assigns keyboard equivalents

HX Glossary

Provides functions to enter special symbols or lengthy blocks of text quickly and easily.- saves typing by replacing abbreviations with entire text blocks- Symbol palette enables you to enter special symbols- Picture Font palette enables you to enter picture symbols

HX Index/TOC

Automatically creates an index or a table of contents within QuarkXPress.- select text and mark it as an entry to build an index or TOC- generates TOC or index when all entries are marked- creates an index or TOC from separate documents, too

HX PowerResize

The HX PowerResize XTension program enables you to select multiple text boxes, picture boxes and lines including those contained in a group, and resize not only outlines of boxes but also their contents and format controls with a single operation.

HX PowerSearch

Enables you to find and replace attributes of text, paragraph, style sheet, text box, picture box, line or frame.- finds and display an item to meet the find specifications- the search range can be entire document, user speci- fied pages, selected boxes or selected text- you can search only specific type of boxes in the search range- replaces attributes of the found item with replacement specifications.

HX Shortcut

Enables you to apply a predefined set of attributes to a selected item or text from the keyboard.- shortcuts defined with a set of attributes- supports character, paragraph, text box, picture box, line and frame- sets can be applied to the selected item by pressing a key- sets can be applied by clicking a shortcut name in the palette

Job Time

With the Job Time XTension, the amount of time spent on a QuarkXPress document can be automatically tracked and documented eliminating the needto create inaccurate time estimates. With Job Time, various activi- ties suchas layout, correction, or input activities can be documented separately.Job Time saves the tracking information with the document and can be exported as an ASCII-file. The exported file can be processed by a database or spreadsheet program.

Keyboard Shortcuts for LP 2.6

Now for power users of Live Picture 2.6 comes a new product from Left Dakota: Keyboard Shortcuts for Live Picture 2.6! Simply run this installer on your English version of Live Picture 2.6 (not 2.5) and over 95% of the program will have keyboard shortcuts.

Layer It!

Layer It! is an XTension that helps manage multiple layers of a complex XPress document. Layer It! lets users hide the parts of a document that cause the bottleneck so they can work more efficiently. It can select items layer by layer, moving up and down, to help users understand how the layers overlap in any given document.

MasterMenus

MasterMenus provides an easy way for you to have commonly used menu items as close as a click on a custom palette which contains exactly what you choose! The MasterMenus Preferences dialog provides an easy inter- face that is used to build the custom palette.

Math Grabber

Lets you perform spreadsheet-like calculations on numerical text appearing anywhere in a QuarkXPress docu- ment. Users can specify precision of calculation, and can also create "separator sets" which allow you to work

with mixed currency formats in the same document. Full Undo/Redo support.

Missing Link

The Missing Link adds features to the Unlinking and Linking tools. The Linking tool can now be used to link text chains to other text chains that already contain text. The Unlinking tool can be used to duplicate a box that is part of a linked text chain. The duplicate box contains the text present in the original box.

Navigator XT

Navigator XT is a palette that allows users to move through a QuarkXPress document effortlessly. The palette displays a thumbnail of the current page or spread. Clicking on a point in the thumbnail scrolls the document to the point where it was clicked.

Notes

The Notes XTension displays a notes palette so you can enter and display non-printing notes in a QuarkXPress document.

Nouveau II

Nouveau II gives the standard QuarkXPress New document dialog a facelift, adding several features. Nouveau's features include the ability to save multiple new document settings, creating a document whichstarts a new section, and automatically setting a number of pages to be created at the creation of the document.

Pasteboard XT

Pasteboard XT allows you to change the width and height of the pasteboard. This is similar to changing the pasteboard width percentage using the QuarkXPress application Preferences.

Pasteboard XTerminator

Allows you to remove the requirement of having Pasteboard XT installed from documents whose pasteboard size has been altered with Pasteboard XT.

Picture Manager

The Picture Manager XTension is a must for any XPress user who works with multiple graphics in their documents. Picture Manager has a unique graphic hunt and import capability which rounds up and batches various graphic files from specified folders and volumes anywhere on the network.

PrinterPicker

PrinterPicker lets you change output devices on the fly from within the QuarkXPress environment. PrinterPicker's functions are accessed through an unobtrusive floating palette. A pair of popup menus let you make your selections with ease to make switching output devices a snap.

QuickMenus XT

QuickMenus XT puts hard-to-access features of QuarkXPress right into the title bars of every document window! Now you can get at the features you need most without floating toolbar palettes getting in the way. With QuickMenus XT you can quickly find and use commands right in the window where you are working.

QX-Tools

QX-Tools 2.0 is an award-winning collection of XTensions for QuarkXPress. Designed to be productive without a steep learning curve, QX-Tools offers 15 useful tools that address a variety of common tasks.

RefreshIt

Adds a keystroke to force XPress to redraw after screen redraw has been interrupted.

Resize XT

Resize XT offers two ways to resize groups of page elements in QuarkXPress. Users may activate the Resize XT preference dialog to indicate how the group should be resized. Resize XT also adds the Resize Tool to the QuarkXPress tool palette. The Resize Tool may be used to drag the corner of a group to indicate its new size. Supports proportional and non-proportional scaling.

SaveMe

SaveMe is an XTension which reminds you it is time to save your document when you are working within QuarkXPress 3.2 or higher. Saving your document more frequently may help you lose less work if your Mac unexpectedly crashes or if there is a power failure.

SpellBound

The SpellBound spell checker provides functionality and features not found in the internal QuarkXPress spellchecker. Spellbound is available in many languages, it allows access to multiple auxiliary dictionaries and provides an exception dictionary (useful for house styles). Spellbound has a phonetically-based lookup facility.

SpellBound Technical Dictionary

Auxiliary dictionaries for the SpellBound XTension including thousands of terms needed by today's health care, legal, and scientific engineering professionals. You're only a split second away from turning your QuarkXPress into a technical word expert!

Super Tabs

The Super Tabs XTension gives you direct access to all tabs defined in our document. Tab settings are displayed in an editable list, where you can seethe distances in relative or absolute mode. The relative mode is especiallyuseful for making tables. The distances shown in the palette are the spacesbetween the tabs stops and are easy to edit. From the palette you can alsoedit the tab settings within style sheets.

Tab Grabber

Interactively adjust tab positions by dragging a marquee around the page area you wish to modify. Allows you to select and modify all tab settings without the need to edit Quark style sheets or change tab settings one at a time. Nudge a column into perfect position, change alignment or fill character. Full Undo/Redo support.

TableMaker

Use Gluon TableMaker to convert TAB delimited text into an accurate table instantly. TableMaker can be used to "force fit" your table into the text box size.

Text Grabber
Select and modify text attributes anywhere on a page using the Meadows unique "marquee" method of text selection. Drag a marquee around any page area and change all text falling within the marquee. Great for changing complete columns in tabular composition. Includes Apply button and full Undo/Redo support.

Thing-a-ma-Bob
Thing-a-ma-Bob includes updated features from the FeaturesPlusT XTension: Make Fraction/Price, Value Converter Palette, Remove Manual Kerning and Word/Space Tracking features.

UngroupAll
UngroupAll is an XTension which allows you to ungroup layers of grouped items.

Unlinker
How many times have you gone to duplicate or copy a box only to get a warning that this box has linkages which can't be duplicated? Unlinker solves this problem instantly by unlinking the box, leaving all the text exactly the same.

UPC-EAN XTension
The UPC-EAN Xtension generates bar code symbols as EPS files - simply type in your symbol's digits. You can create UPC version A, UPC version E, Bookland (ISBN), ISSN, EAN-8/JAN-8, and EAN-13/JAN-13 symbols.

Xdream
This collection of more than two dozen multipurpose utilities for QuarkXPress makes all kinds of everyday publishing tasks easier. It includes conversion of documents to printer's spreads format, case conversion, counting selected words, text alphabetizing and a style sheet reporting utility. It can magnify the view of documents onscreen up to 1,200 percent and even automatically deletes colors not actually being used in the document.

XNotes
XNotes allows the user to write messages which become part of the QuarkXPress file. The notes can be written, read, edited, deleted, or printed by anyone who has a copy of XNotes. XNotes gives the user a way to communicate with the person who might later open QuarkXPress documents, including directions to service bureaus or messages to other users.

XToons
XToons is a family of small QuarkXPress XTensions, each one providing one single feature. Started with 6 members, the XToons family is now counting 25 members and is scheduled to expand by 6 new items every quarter.

XToons Pairs
4 pairs of XTensions, normally available only as a part of the XToons Collection, designed to enhance your productivity.
