

Zetra

Designed for particularly demanding divers

This state-of-the art blade is based on the latest technology. The design is the same found in the Xeno blade to aid thrust while helping water channeling in the correct direction for maximum efficiency. The anatomic foot-pocket was designed keeping the modern divers boots in mind, the result being optimum fit.

Rubberized side ribs improve elasticity, thus maximizing resistance to cuts and abrasion. The inside of the anatomic foot-pocket features brand-new ribs to improve fit and stiffen the sole.
