

PPrep • FPO TBox - Delete

©1995 Nythawk Productions

This script will delete every text box containing the text “•FPO•”.

It is an example of:

1) using an “every... whose” qualifier as a way to filter through all text boxes in the document to find only those containing certain text.

WARNING! At the time of this writing, QuarkXPress is very sensitive to deleting, via a script, elements in a group. It is possible that this may cause a crash occasionally.
