

PPrep • Make FPO Overlays

©1995 Nythhawk Productions

This script will place text boxes containing “•FPO•”, over every selected picture box.

It is an example of:

- 1) using an “every... whose” qualifier as a way to filter through all the picture boxes in a document to find only the selected ones.
- 2) coercing all the found object references into a list
- 3) applying a repeat loop to a list in reverse order
