

Text • Dollars to Yen

©1995 Nythawk Productions

This script finds every Dollar amount in the text flow and converts it to Yen or Pounds.

Dollar amounts must be formatted as \$#,###.## with two decimals.

Commas may be used.

NOTE: Do not convert the number to text in the script as it might result in numbers displayed

in scientific notation. QuarkXPress will handle the coercion into a proper number--just paste

the number into the text flow.
