

FLIGHTCHECK® TrueFile™ Solutions

FLIGHTCHECK® uses an advanced and quite sophisticated internal checking technology called "TrueFile™". This patented process of examination, verification and attestation assures the validity and integrity of all the files involved in your job. Besides checking the usage of colors, whether or not a font exists, if the image resolutions are desirable, FLIGHTCHECK® also digs very deep to inspect details of a document otherwise hidden from a casual observer. FLIGHTCHECK® performs its duties at a high rate of speed and accuracy, thus making FLIGHTCHECK® a reliable and dependable part of the professional workflow.

When FLIGHTCHECK® posts the results of its findings, it also displays a general recommended "remedy". Often this adds up to a simple "don't do that", but for any serious flightchecker, understanding what exactly constitutes a "problem" and the correct procedure to solve the problem is a must. Obtaining the know-how to find and repair the problems with a job also leads to the ability to create better and "truer" jobs in the first place. Hence the term "TrueFile™": an advanced technology developed to assure the quality and speed of the printing process workflow.
