

Silverlining Lite is a control panel which provides essential Macintosh drive management functions for locally attached drives. Use Silverlining Lite to quickly mount and unmount volumes, change SCSI polling preferences, format drives, and erase volumes.

Silverlining Lite is compatible with SCSI hard drives and removable drives, and Macintosh IDE hard drives and removable cartridge drives. Silverlining Lite works with drives and cartridges initialized by Silverlining Full Version, including drives and cartridges with multiple partitions.

Silverlining Lite is fully compatible with all Macintosh models (including PowerBooks, AVs and Power Cs), Macintosh system software versions 6.x and 7.x (including 7.5); and SCSI Manager 4.3(including Macintoshes that support multiple SCSI buses) and Macintosh IDE drives .

Silverlining Lite Features:

- Creates a single partition on SCSI and Macintosh IDE hard drive and removable cartridge drives.
- Automatically mounts removable cartridges on the desktop when a cartridge is inserted.
- Formats and initializes SCSI and Macintosh IDE hard drive and removable cartridges.
- Displays information about a SCSI/IDE bus, device, and volume.
- Includes options to change drive polling preferences.
