

## WARNING

### POSSIBLE LOSS OF HARD DISK INSTALLS!

#### PLEASE READ THESE INSTRUCTIONS CAREFULLY BEFORE INSTALLING

This updater installs updated Max applications, external objects and help files.

This updater can only install versions of the MaxFAT and Max68K applications that are compatible with a key disk whose label reads Max 3.5.8 or later on it. If you have a old key disk whose label reads Max 3.5 or 3.5.1, DO NOT INSTALL THE APPLICATIONS, or if you do install them, DO NOT RUN THE APPLICATIONS AND ATTEMPT TO AUTHORIZE THEM WITH YOUR OLD KEY DISK. YOU MAY DESTROY YOUR OLD KEY DISK AND LOSE ALL OF YOUR HARD DISK INSTALLS.

If you wish to update your MAX application and do not have a 3.5.8 or later key disk, contact Opcode or your local Opcode distributor for a replacement.

To update only the external objects and help files, choose Custom Install from the installer dialog and uncheck Max Application and Max 68K Application.

If you have more than one folder containing Max applications on your hard disk, the installer may not choose the one you want as the install location. At the bottom of the installer dialog, the installer will indicate where it is going to install the updated files.

If this is not where you want it to perform the update, choose Select Folder... from the pop-up menu next to this location and pick the desired folder.

The newly installed Max applications are called "MaxFAT3.5.9-8" and "Max68K3.5.9-8"

If you have special or customized versions of standard Max external objects, you may wish to back them up before installing. They will be replaced with the latest versions from the installer.
