Speller XT is a (re)spelling tool for a great number of European languages, which was developed with orthographic modules from *TALO. The spelling tool underwent different tests from various official institutes. Corrections are implemented based on a dictionary plus default and/or personal corrections.
Thanks to its integrated OCR-mode it is also possible to recognize and correct mistakes which occurred during the scanning of a text.

Key features of Speller XT are:
•
Automatic spelling or respelling
•
Client/server solution
•
Server update lexicons
•
1 or more dictionaries per language module
•
Automatic language detection with multilingual documents
•
Default and Personal Correction lists
•
Centralized use of correction lists
•
Lexicon mode (search with or without wildcard)
•
OCR-mode (awareness of scanned text)
•
Available language modules: English**, French*, German*, Dutch*, South African, Swedish, Norwegian, Danish, Finnish, Italian, Spanish, Catalan, and Portuguese

*
Incl. spelling reform or recommendations
**
Incl. automatic respelling British English/American English

This demo version only includes: English (British/American), French, German (reformed) and Dutch (reformed). For the other languages and more information you can visit our website.
