Anagrams

What it is

An anagram is a phrase created by scrambling the letters of another phrase. For example, an anagram of information superhighway is "New utopia? Horrifying sham!"

You just type in a word — your name, for instance — and this program automatically spews out thousands of English phrases, or pseudo-phrases, composed of those rearranged letters. Anagrams (the program) offers several clever methods of weeding out the junky nonsense phrases, making it much easier for you to locate the meaningful ones.
