

Flash-It

What it is

Flash-It is a shareware screen-capture utility. Flash-It defines up to five screen-capture key combinations (called HotKeys). Each HotKey performs one of the following functions:

*

Captures a portion of the screen image to the Clipboard.

*

Leaves the captured image in the Clipboard or saves it to a PICT-based disk file or to the Scrapbook or sends it to the printer.

*

Lets you choose the destination of the image on the fly.

Flash-It works even while menus are being displayed. It can capture only the frontmost window (or alert/dialog box) or only the displayed menu; if you want, you can capture the pointer (or cursor) as part of the image. Flash-It can scale up or down the captured image from 5 to 3200 percent, in 5 percent steps, works with multiple monitors, and lets you specify the document creator for the PICT-based disk files.

What you need

System 6.0.3 or later (6.0.5 or later is recommended).

Installation summary

Open the SOFTWARE SAMPLER folder on the CD-ROM. Open the Flash-It folder. Drag the Flash-It icon to your System Folder and click OK. Restart your Mac.

The manual

Flash-It's manual comes in the form a word processing document, in your choice of three formats: Word (4/5/6), MacWrite, or ClarisWorks 4 (all are in the Flash-It folder). If you own one of those programs, double-click the document. If not, launch your word processor; then choose Open from the File menu to import the manual.

Notes and credits

Flash-It is shareware — \$15. Author: Nobu Toge.
