Overview

Once you have browsed the PhotoLib™ Library and selected images for large format quality printing you will require these images in high-resolution format. High-resolution images can be ordered in various formats:

Special Theme CDs contain up to 400 preselected high-resolution images covering a particular theme.

PhotoLib™ Portfolio CDs are manufactured to your order with exactly those images you require.

PhotoLib™ Images on Diskette

PhotoLib™ Special Theme CDs

There are a number of collections on CD - Special Theme CDs:

These Special Theme CDs contain a selected number of photographs in high resolution. The corresponding low resolution images on PhotoLib™ Volume 1, 2 and 3 CDs have keywords indicating on which Special Theme CD they are included.

Background and Textures

Contains 111 images. 3000 x 2000 pixels in JPEG format

PL_PD4
Science and Technology

Contains 227 images. 2100 x 1400 pixels in JPEG format

PL_PD5
World Commerce and Travel

Contains 352 images. 2100 x 1400 pixels in JPEG format

PL_PD6
Nature, Wildlife and Environment

Contains 336 images. 2100 x 1400 pixels in JPEG format

Please use the ORDER FORM to order your copy of a Special Theme CD.

PhotoLib™ Portfolio

Any PhotoLib™ Image with a numerical file name or a filename starting with PO can be ordered on Portfolio CD.

Images on Portfolio CD are either in Kodak PhotoCD or in JPEG format. You have to choose the format before ordering. Files starting with PO can only be ordered as JPEG.

Images in Kodak PhotoCD file format contain five resolutions. The highest resolution is 3072 times 2048 pixels. These images are original PhotoCD scans. No cropping or image adjustment has been made. You will require Adobe Photoshop for reading the Portfolio CD with Kodak PhotoCD images. One such Portfolio CD can contain up to 120 images.

PhotoLib™ Portfolio is a CD-ROM disk - not a PhotoCD disk! Programs such as Apple Photo Access cannot read Portfolio CD!

Images in JPEG format contain up to 3072x2048 pixel (18 MB file size) and are JPEG compressed. For most photographs cropping and rotation was applied but not other adjustments have been made. The image can be read by any program supporting JPEG or be converted by the Picture Decompressor utility. One such Portfolio CD can contain up to 400 images. Images with filenames starting with PO are approx. up to 1800 x 1200 pixel.

In theory the JPEG image will have lost some of the original image information because of the compression. In practice you will not be able to detect this difference.

Before printing cropping, rotation and image adjustment may be required. You should have the appropriate hardware and software (such as Adobe PhotoShop) for that purpose.

For ordering please use the ORDER FORM. For each image use the order code from the description of the image.

PhotoLib™ Images on Diskettes

Any Photolib™ Image with a numerical file name or a filename starting with PO can be ordered on diskette.

Images on diskette are in JPEG format and contain 2920 x 1940 pixel (16 MB file size). Many of these are JPEG compressed versions of the original PhotoCD scan. Images are cropped and rotated but no other adjustments have been made. The image can be read by any program supporting JPEG or be converted by the Picture Decompressor utility. Images with filenames starting with PO are approx. up to 1800 x 1200 pixel.

Before printing cropping, rotation and adjustment may be required. You should have the appropriate hardware and software (such as Adobe Photoshop) for that purpose.

For ordering please use the ORDER FORM.
