

There is 1 MB of VRAM soldered on the motherboard. There are three 1 MB VRAM DIMM sockets which, combined with the motherboard VRAM, are configured as two 2 MB banks.

There are three possible configurations, although the machine ships with a minimum of 2 MB:

- 1/2 Bank (1 MB, 32-bit data path)***
- 1 Bank (2 MB, 64-bit data path)***
- 2 Banks (4 MB, 64-bit data path).***

This computer has built-in hardware for acceleration of some QuickDraw functions.
