

SmoothPay

Certificate of Year 2000 Software Compliance

SmoothPay Payroll for Windows is fully Year 2000 compliant, even when used on non-compliant equipment (as the dates used are provided by the user and stored internally in correct format). This means that SmoothPay will continue to work correctly on Windows 3.1x, 95, 9 and NT systems, and any PC capable of running such systems that meets the minimum specifications.

Any date up to and including the year 9999 is correctly supported.

All date related maths has been checked and verified to work correctly.

According to Microsoft, the FoxPro database and programming language is compliant with minor issues, namely that where dates are entered by the user using the 2 digit century short form (e.g. 010100) they will be treated as 01011900, not 01012000. The system provides in every case for entry of a 4-digit century.
